1 Overview

The NuTiny-SDK-NUC200 is a specific development tool for the NuMicro NUC200 series users to develop and verify the application program easily. The NuTiny-SDK-NUC200 includes two portions: NuTiny-EVB-NUC200 (an evaluation board) and Nu-Link-Me (its Debug Adaptor), such that users do not need additional ICE or debug equipment.

2 Introduction to NuTiny-SDK-NUC200

The NuTiny-SDK-NUC200 uses the NUC200VE3AN as the target microcontroller. Figure 2-1 shows the NuTiny-SDK-NUC200 for NUC200 series, in which the left portion is called NuTiny-EVB-NUC200 and the right portion is called Nu-Link-Me. ...

The NuTiny-EVB-NUC200 is similar to other development boards, by which users can develop and verify applications to emulate the real behavior. The on board chip covers NUC200 series features. The NuTiny-EVB-NUC200 can be a real system controller to design the users' target systems.

The Nu-Link-Me is a Debug Adaptor, which connects your PC's USB port to a target system (via Serial Wired Debug Port) and allows you to program and debug embedded programs on the target hardware. To use the Nu-Link-Me Debug adaptor with IAR or Keil, please refer to "Nuvoton NuMicro™ IAR ICE Driver User Manual" or "Nuvoton NuMicro™ Keil ICE Driver User Manual" for details. The two documents will be stored in the local hard disk when each is installed.
