1 Overview

The NuTiny-SDK-M453 is a specific development tool for NuMicro™ M453 Series. User can use NuTiny-SDK-M453 to develop and verify the application program easily. The NuTiny-SDK-M453 includes two parts: NuTiny-EVB-M453 and Nu-Link-Me. The NuTiny-EVB-M453 is the evaluation board and Nu-Link-Me is its Debug Adaptor. Therefore, user does not need other additional ICE or debug equipment.

2 Introduction to NuTiny-SDK-M453

The NuTiny-SDK-M453 uses the M453VG6AE as the target microcontroller. Figure 2-1 shows the NuTiny-SDK-M453 for M453 Series, in which the left portion is called NuTiny-EVB-M453 and the right portion is called Nu-Link-Me.

The NuTiny-EVB-M453 is similar to other development boards. User can use it to develop and verify applications to emulate the real behavior. The on-board chip covers M453 Series features. The NuTiny-EVB-M453 can be a real system controller to design users' target systems.

The Nu-Link-Me is a Debug Adaptor, which connects your PC's USB port to your target system (via Serial Wired Debug port) and allows you to program and debug embedded programs on the target hardware. To use the Nu-Link-Me Debug Adaptor with IAR or Keil, please refer to the "Nuvoton NuMicro™ IAR ICE Driver User Manual" or "Nuvoton NuMicro™ Keil ICE Driver User Manual" for details. The two documents will be stored in the local hard disk when each driver is installed.

Figure 2-1 NuTiny-SDK-M453 (Blue PCB Board)

2.1 NuTiny-SDK-M453 System Description

2.1.1 Power Settings

- **J2**: USB port in Nu-Link-Me
- **CON1/J3**: Micro USB port in NuTiny-EVB-M453
- **JP1**: VCC5V voltage connector in NuTiny-EVB-M453

POWER Mode	J2 USB Port (Mini)	CON1/J3 USB Port (Mini/Micro)	JP1 VCC5V	MCU Voltage	Comment
Mode 1	Connected to PC	X	DC 3.3V or 5V Output	DC 3.3V or 5 V	J2 (from PC) supplies the power. MCU voltage can be selected to 3.3V or 5V through JPR1.
Mode 2	X	Connect to PC (USB port is device)	DC 3.3V or 5V Output	DC 3.3 V or 5V	CON1/J3 (from PC) supplies the power when pins of JP14 are shorted together.
Mode 3	X	Connect to USB device (USB port is host)	DC 5V Input	DC 5V	JP1 supplies the power when JP1 is wired to pin1 of JP14 .

X: Unused.

2.1.2 Debug Connectors

- **JP2**: The connector in the target board (NuTiny-EVB-M453) for connecting with Nuvoton ICE adaptor (Nu-Link, Nu-Link-Pro or Nu-Link-Me)
- **JP11**: The connector in the ICE adaptor (Nu-Link-Me) for connecting with a target board (e.g. NuTiny-EVB-M453)

2.1.3 USB Connector

- **J2**: Mini USB connector in Nu-Link-Me connected to a PC USB port

2.1.4 USB OTG Host/Device Connector

- **CON1/J3**: Mini/Micro USB connector in NuTiny-EVB-M453 for application use

2.1.5 Extended Connectors

- **JP5, JP6, JP7 and JP8**: Show all chip pins in NuTiny-EVB-M453

2.1.6 Reset Buttons

- **SW1**: Reset button in NuTiny-EVB-M453. Press this key to reset the target chip M453VG6AE.

2.1.7 Power Connectors

- **JPR1:** An option to select whether the 3.3V voltage input supplied by the ICE bridge (default)
- **VBAT:** The VBAT connector in NuTiny-EVB-M453 to supply an extra battery power for RTC application. The default is shorted with VCC33.
- **VREF:** The VREF connector in NuTiny-EVB-M453 to supply an external reference voltage for analog peripherals. The default is shorted with VCC33.
- **VDDIO:** The VDDIO connector in NuTiny-EVB-M453 to supply a special voltage for some GPIOs. The default is shorted with VCC33.
- **JP1:** VCC5V connector in NuTiny-EVB-M453 to supply target chip voltage from an extra power supplier.
- **JP4:** GND connector in NuTiny-EVB-M453

2.2 Pin Assignment for Extended Connectors

The NuTiny-EVB-M453 provides the M453VG6AE target chip on board and the extended connectors (**JP5**, **JP6**, **JP7** and **JP8**) for LQFP 100-pin.

No	Pin Name	No	Pin Name

2.3 NuTiny-SDK-M453 PCB Placement

The following figure shows the NuTiny-SDK-M453 PCB placement.

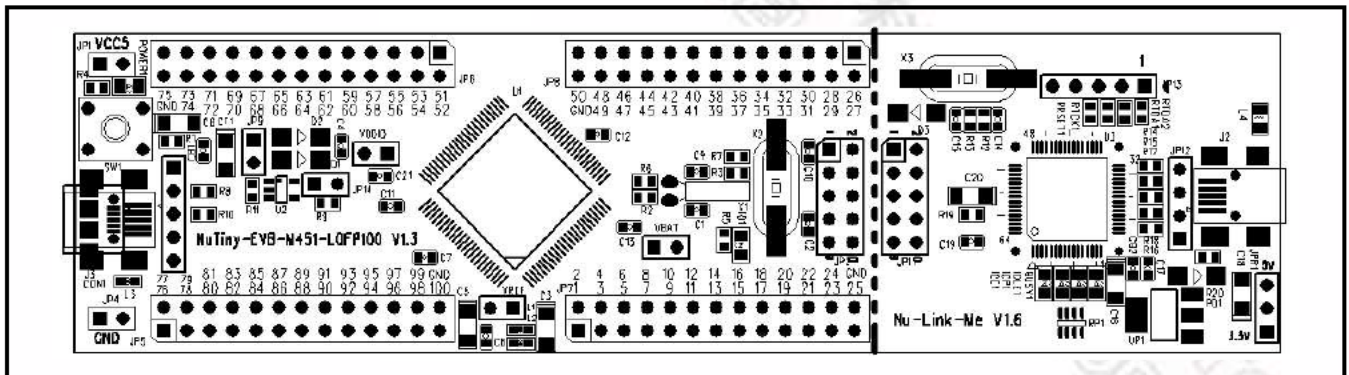

Figure 2-2 NuTiny-SDK-M453 PCB Placement

3 Starting to Use NuTiny-SDK-M453 on the Keil μ Vision[®] IDE

3.1 Downloading and Installing Keil μ Vision[®] IDE Software

Please connect to the Keil company website (<http://www.keil.com>) to download the Keil μ Vision[®] IDE and install the RVMDK.

3.2 Downloading and Installing Nuvoton Nu-Link Driver

Please connect to Nuvoton NuMicro[™] website (<http://www.nuvoton.com/NuMicro>) to download the “NuMicro[™] Keil μ Vision[®] IDE driver” file. Please refer to *section 6.1* for the detailed download flow. After the Nu-Link driver is downloaded, please unzip the file and execute the “Nu-Link_Keil_Driver.exe” to install the driver.

3.3 Hardware Setup

The hardware setup is shown in the following figure.

Figure 3-1 NuTiny-SDK-M453 Hardware Setup

3.4 Example Program

This example, as shown in the directory in Figure 3 2, demonstrates downloading and debugging an application on a NuTiny-SDK-M453 board. The example file can be downloaded from Nuvoton NuMicro™ website as described in section 6.3.

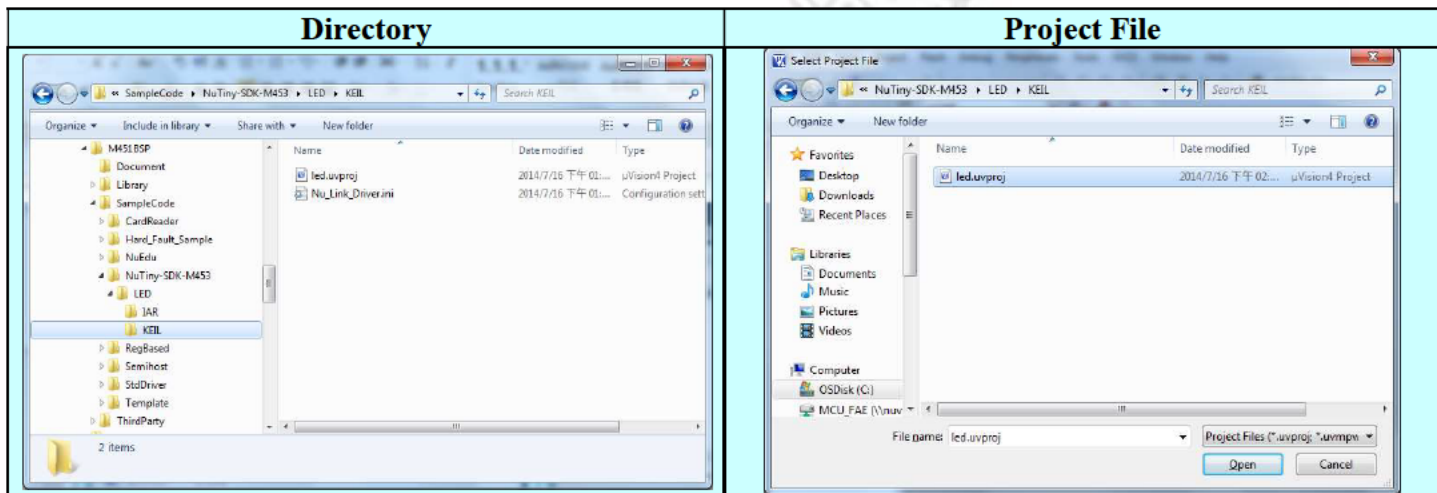

Figure 3-2 Example Directory

To use the example:

The I/O LED on the NuTiny-EVB-M453 board will be toggled on.

-  **Start μ Vision®**
- **Project – Open**
Open the led.uvproj project file
-  **Project – Build**
Compile and link the LED application
-  **Flash – Download**
Program the application code into on-chip Flash ROM
-  **Start Debug mode**
When using the debugger commands, you may:
 - ◆  Review variables in the watch window
 - ◆  Single step through code
 - ◆  Reset the device
 - ◆  Run the application

4 Starting to Use NuTiny-SDK-M453 on the IAR Embedded Workbench

4.1 Downloading and Installing IAR Embedded Workbench Software

Please connect to IAR company website (<http://www.iar.com>) to download the IAR Embedded Workbench and install the EWARM.

4.2 Downloading and Installing Nuvoton Nu-Link Driver

Please connect to Nuvoton Company NuMicro™ website (<http://www.nuvoton.com/NuMicro>) to download “NuMicro™ IAR EWARM Driver” file. Please refer to section 6.2 for the detail download flow. After the Nu-Link driver is downloaded, please unzip the file and execute the “Nu-Link_IAR_Driver.exe” to install the driver.

4.3 Hardware Setup

The hardware setup is shown in the following figure.

Figure 4-1 NuTiny- SDK-M453 Hardware Setup

4.4 Example Program

This example, as shown in the directory in Figure 4-2, demonstrates downloading and debugging an application on a NuTiny-SDK-M453 board. The example file can be downloaded from Nuvoton NuMicro™ website as described in *section 6.3*.

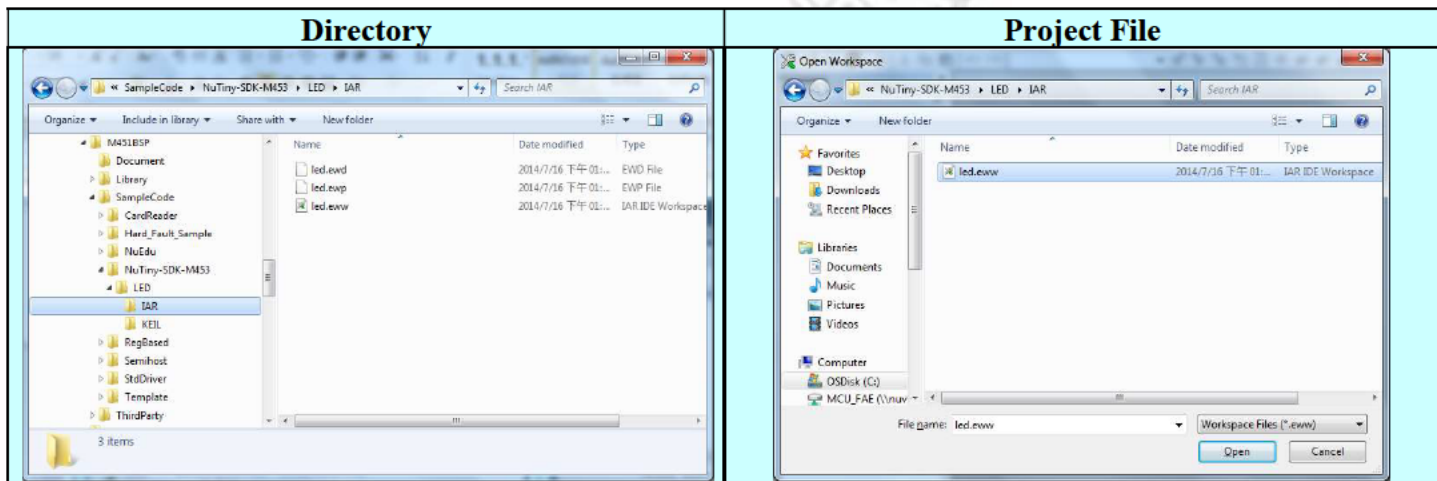

Figure 4-2 Example Directory

To use the example:

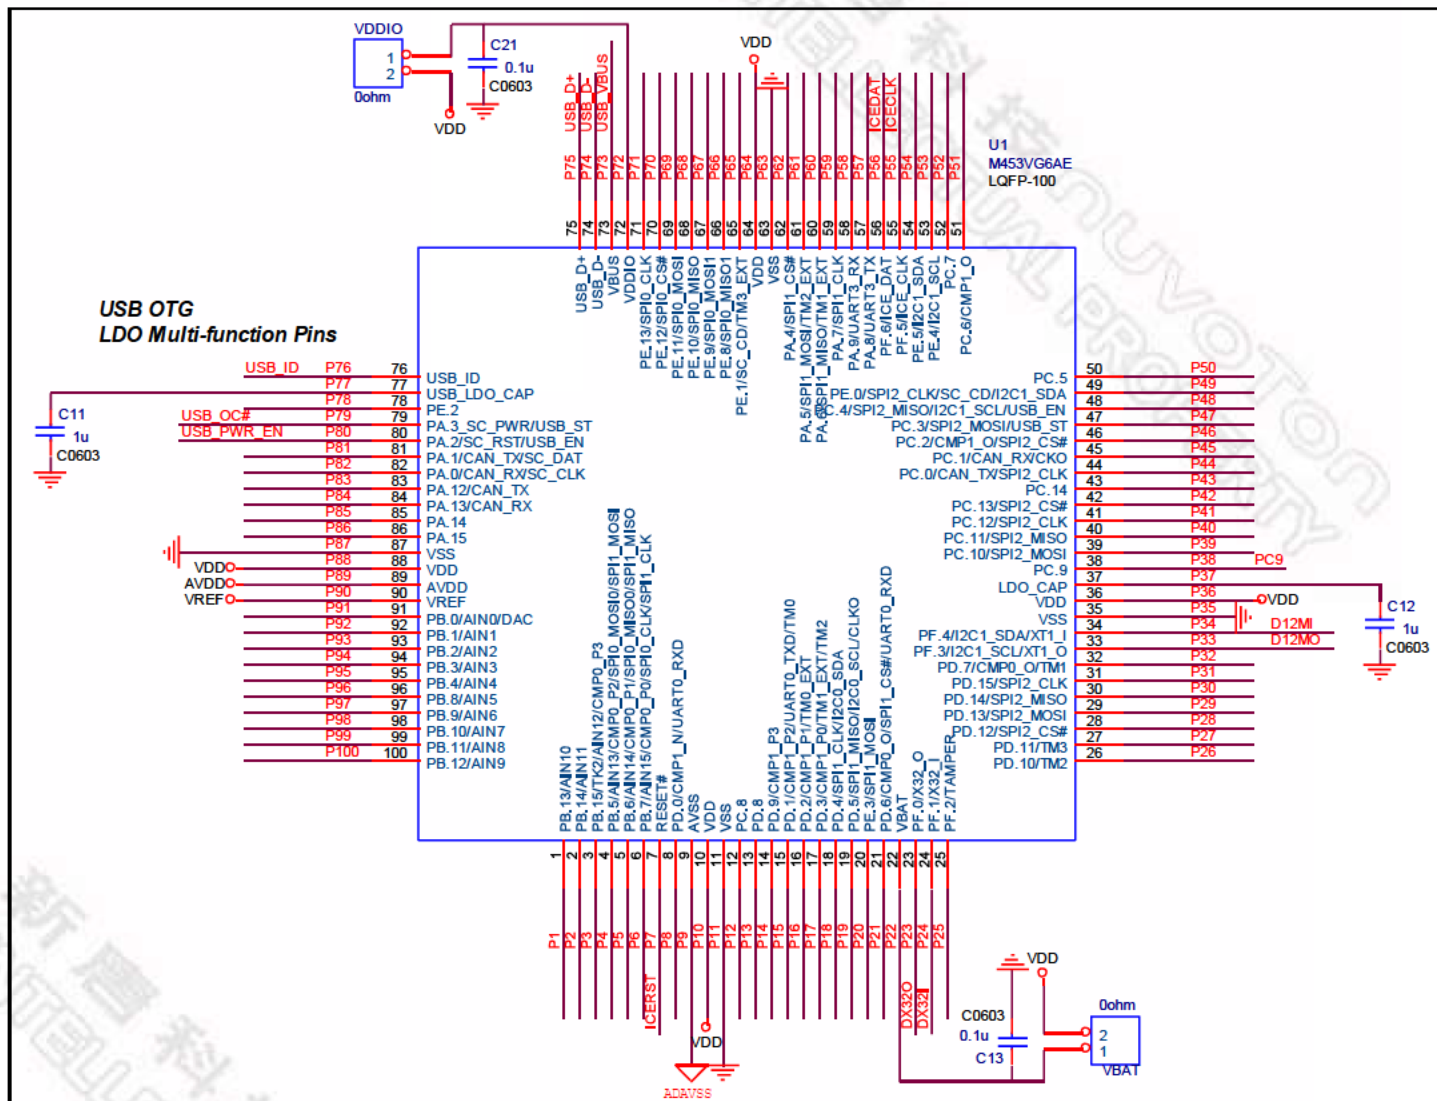

The I/O LED on the NuTiny-EVB-M453 board will be toggled on.

- **Start IAR Embedded Workbench**
- **File-Open-Workspace**
Open the led.eww workspace file
- **Project - Make**
Compile and link the LED application
- **Project – Download and Debug**
Program the application code into on-chip Flash ROM
 - ◆ Single step through code
 - ◆ Reset the device
 - ◆ Run the application

Important Notice

Nuvoton Products are neither intended nor warranted for usage in systems or equipment, any malfunction or failure of which may cause loss of human life, bodily injury or severe property damage. Such applications are deemed, "Insecure Usage".

Insecure usage includes, but is not limited to: equipment for surgical implementation, atomic energy control instruments, airplane or spaceship instruments, the control or operation of dynamic, brake or safety systems designed for vehicular use, traffic signal instruments, all types of safety devices, and other applications intended to support or sustain life.

All Insecure Usage shall be made at customer's risk, and in the event that third parties lay claims to Nuvoton as a result of customer's Insecure Usage, customer shall indemnify the damages and liabilities thus incurred by Nuvoton.

Please note that all data and specifications are subject to change without notice.
All the trademarks of products and companies mentioned in this datasheet belong to their respective owners.
