1 OVERVIEW

The NuMaker-HMI-N9H30 is an evaluation board for GUI application development. The NuMaker-HMI-N9H30 consists of two parts: a NuMaker-N9H30 main board and a NuDesign-TFT-LCD7 extension board. The NuMaker-HMI-N9H30 is designed for project evaluation, prototype development and validation with HMI (Human Machine Interface) function.

The NuMaker-HMI-N9H30 integrates touchscreen display, voice input/output, rich serial port service and I/O interface, providing multiple external storage methods.

The NuDesign-TFT-LCD7 can be plugged into the main board via the DIN_32x2 extension connector. The NuDesign-TFT-LCD7 includes one 7" LCD which the resolution is 800x480 with RGB-24bits and embedded the 4-wires resistive type touch panel.

1.1 Features

1.1.1 NuMaker-N9H30 Main Board Features

- N9H30F61IEC chip: LQFP216 pin MCP package with DDR (64 MB)
- SPI Flash using W25Q256JVEQ (32 MB) booting with quad mode or storage memory
- NAND Flash using W29N01HVSINA (128 MB) booting or storage memory
- One Micro-SD/TF card slot served either as a SD memory card for data storage or SDIO (Wi-Fi) device
- Two sets of COM ports:
 - One DB9 RS-232 port with UART_0 used 75C3232E transceiver chip can be served for function debug and system development.
 - One DB9 RS-232 port with UART_2 used 75C3232E transceiver chip for user application
- 22 GPIO expansion ports, including seven sets of UART functions
- JTAG interface provided for software development
- Microphone input and Earphone/Speaker output with 24-bit stereo audio codec (NAU88C22) for I²S interfaces
- Six sets of user-configurable push button keys
- Three sets of LEDs for status indication
- Provides SN65HVD230 transceiver chip for CAN bus communication
- Provides MAX3485 transceiver chip for RS-485 device connection
- One buzzer device for program application
- Two sets of RJ45 ports with Ethernet 10/100 Mbps MAC used IP101GR PHY chip
- USB_0 that can be used as Device/HOST and USB_1 that can be used as HOST supports pen drives, keyboards, mouse and printers
- Provides over-voltage and over current protection used APL3211A chip
- Retain RTC battery socket for CR2032 type and ADC0 detect battery voltage
- System power could be supplied by DC-5V adaptor or USB VBUS

1.1.2 NuDesign-TFT-LCD7 Extension Board Features

- 7" resolution 800x480 4-wire resistive touch panel for 24-bits RGB888 interface
- DIN_32x2 extension connector

Important Notice

Nuvoton Products are neither intended nor warranted for usage in systems or equipment, any malfunction or failure of which may cause loss of human life, bodily injury or severe property damage. Such applications are deemed, "Insecure Usage".

Insecure usage includes, but is not limited to: equipment for surgical implementation, atomic energy control instruments, airplane or spaceship instruments, the control or operation of dynamic, brake or safety systems designed for vehicular use, traffic signal instruments, all types of safety devices, and other applications intended to support or sustain life.

All Insecure Usage shall be made at customer's risk, and in the event that third parties lay claims to Nuvoton as a result of customer's Insecure Usage, customer shall indemnify the damages and liabilities thus incurred by Nuvoton.

Please note that all data and specifications are subject to change without notice.
