1 OVERVIEW

The NuMaker-HMI-MA35D1-S1 is an evaluation board for Nuvoton NuMicro MA35D1 series microprocessors, and consists of three parts: a NuMaker-SOM-MA35D16A81 SOM board, a NuMaker-BASE-MA35D1B1 base board and a 7" TFT-LCD daughter board. The SOM board integrates core components to simplify the system design, based on MA35D16A887C (BGA312 package, and stacking a 256 MB DDR), PMIC power solution, a 16 GB eMMC Flash, and two Gigabit Ethernet PHY. The NuMaker-HMI-MA35D1-S1 has rich peripherals such as 2 sets of Gigabit Ethernet, USB2.0 high-speed host and device, 2 sets of CAN FD, and SPI, I2C, UART, RS-485 serial communication ports for users to facilitate the evaluation in HMI and industrial control, home appliances, 2-wheel cluster, medical device, new energy applications, ML (Machine Learning) or your creative applications.

There are two evaluation boards for the MA35D1 series, NuMaker-HMI-MA35D1-S1 and NuMaker-IoT-MA35D1-A1, which are ideal for HMI and edge gateway applications, respectively. For more details on HMI applications, please refer to NuMaker-HMI-MA35D1-S1 User Manual. For more details on edge gateway applications, please refer to NuMaker-IoT-MA35D1-A1 User Manual.

The NuMicro MA35D1 series is a heterogeneous multi-core microprocessor targeted to high-end edge IIoT gateway. It is based on dual 64-bit Arm Cortex-A35 cores with speed up to 800 MHz, and one 180 MHz Arm Cortex-M4 core. Based on the high-performance cores, the MA35D1 series facilities the tiny AI/ML for edge computing.

The MA35D1 supports 16-bit DDR2 and DDR3/DDR3L SDRAM. For an easy system design and manufacture, the MA35D1 series also offers LQFP and BGA packages stacked with the DDR2/DDR3L SDRAM and density up to 512 MB, which significantly reduces PCB layer, size and electromagnetic interference (EMI).

The MA35D1 series is a trusted system for IoT products' security requirements. It includes several advanced security mechanisms such as Nuvoton Trusted Secure Island (TSI) an isolated secure hardware unit, TrustZone, secure boot, tamper-detection, built-in cryptographic accelerators, and a TRNG, as well as Key Store and OTP memory. All the security operations are performed in the TSI to protect sensitive and high-value data. The features also satisfy customers in IEC 62443 certification requirements.

For high-end edge IIoT gateway requirements, the MA35D1 series provides multiple advanced and high-speed connection interfaces, such as Gigabit Ethernet, SDIO3.0, USB 2.0 HS, and CAN FD, for edge gateway and new energy applications.

For HMI applications, the MA35D1 series provides a LCD display controller with the resolution up to 1920x1080 at 60 FPS, a 2D graphic engine, a JPEG and a H.264 decoder integrated for better graphical HMI effects and video playback.

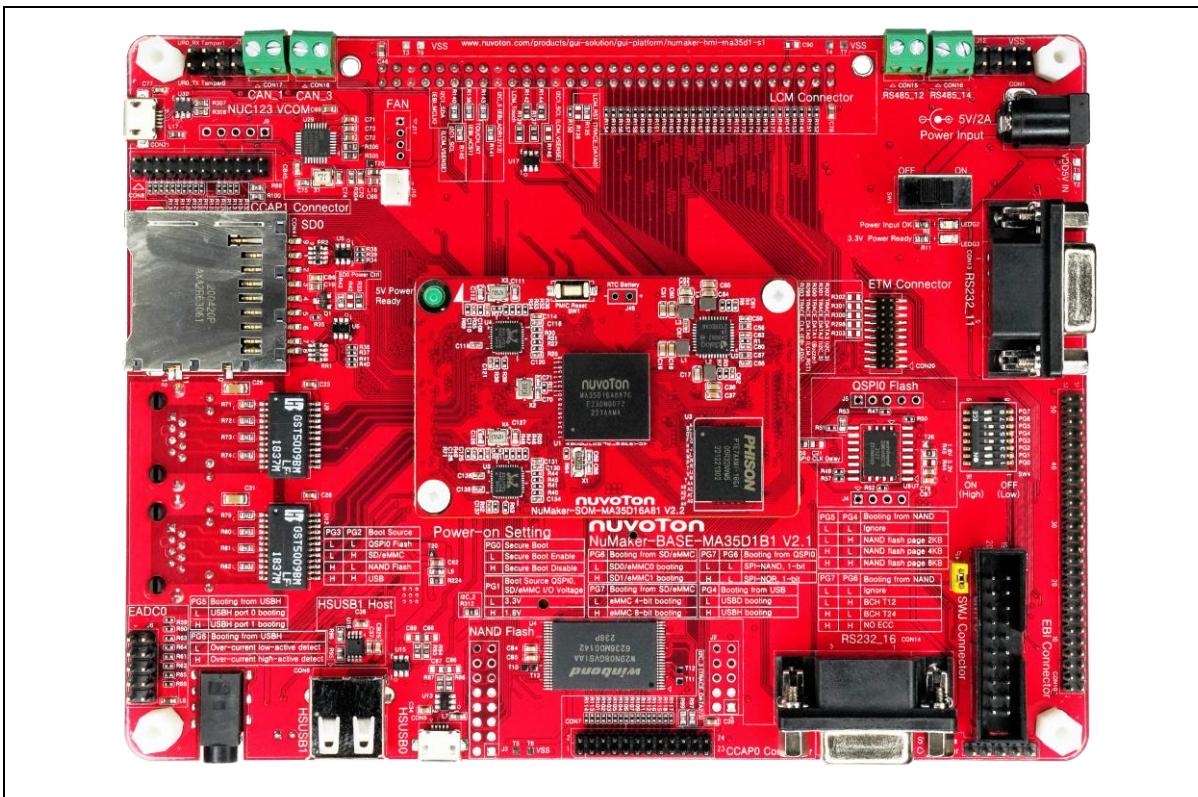

Figure 1-1 NuMaker-HMI-MA35D1-S1 Board from SOM Side

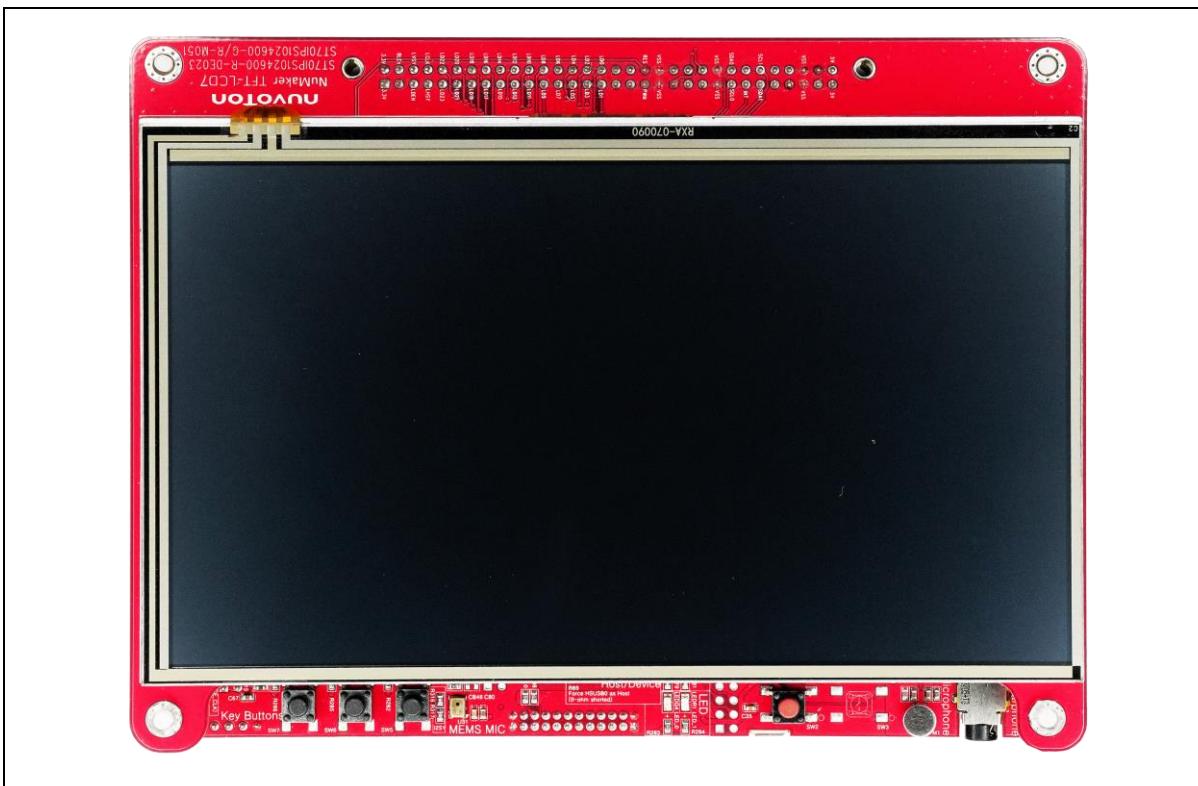

Figure 1-2 NuMaker-HMI-MA35D1-S1 Board from TFT LCD Side

1.1 NuMaker-SOM-MA35D16A81 Board

The NuMaker-SOM-MA35D16A81 board contains an on-board target chip MA35D16A887C packaged in a MCP type with internal DDR3L 256 MB SDRAM, a PMIC device DA9062-3A to supply the powers to the target chip MA35D16A887C and dedicated peripherals on this SOM board, an eMMC NAND Flash memory device, two Gigabit Ethernet (RGMII) PHY devices, a battery input header and a PMIC reset key button.

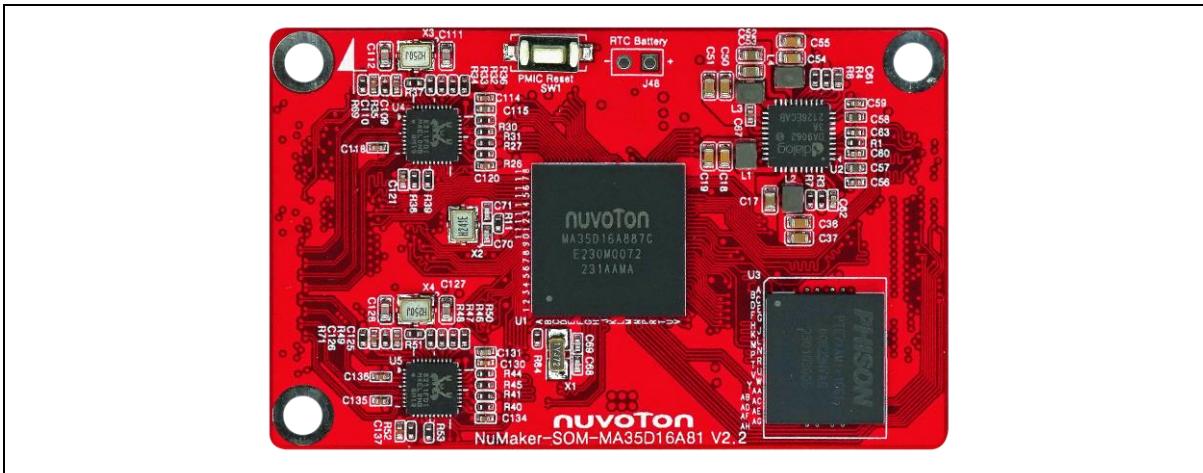

Figure 1-3 NuMaker-SOM-MA35D16A81 Board

1.2 NuMaker-BASE-MA35D1B1 Board

The NuMaker-BASE-MA35D1B1 board contains rich peripherals, including two high speed connectors to connect the NuMaker-SOM-MA35D16A81 board, serial SPI NAND and parallel NAND Flash memory devices, a Standard-SD memory card slot, two Gigabit Ethernet transformers and RJ45 ports, two High Speed USB ports (Host/Device and Host), an audio codec with microphone and headset jack, a 24-bit RGB LCD with touch connector, an External Bus Interface (EBI) connector, two CMOS sensor input connectors, eight channels of ADC input, two RS232 COM ports, two RS485 connectors, two CAN FD connectors, three user key buttons and two user LEDs.

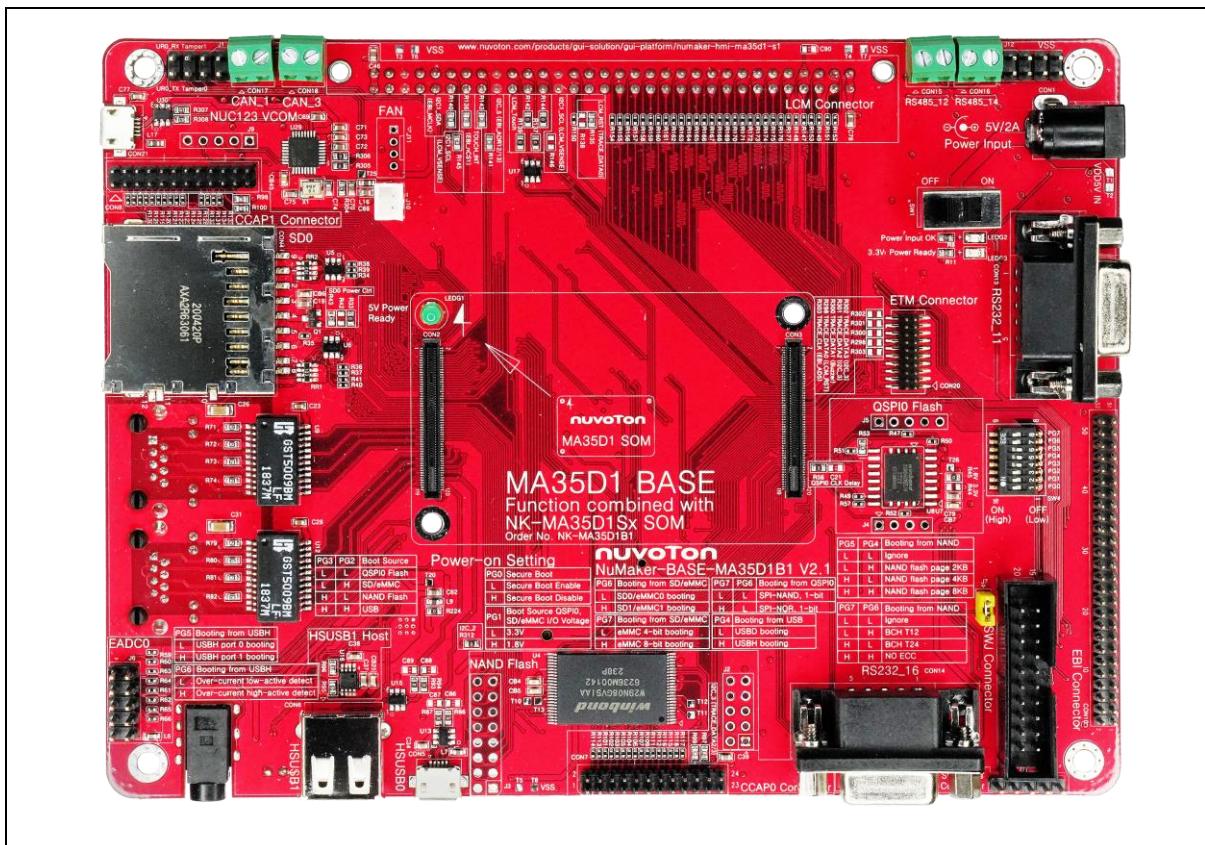

Figure 1-4 NuMaker-BASE-MA35D1B1 Board

1.3 7" TFT LCD Daughter Board

This daughter board contains a 7" 4-wire resistive touch TFT LCD panel with pixel resolution of 1024x600. (TH0701024600NYR50L1 + AN-3748A)

Figure 1-5 7" TFT LCD Daughter Board

1.4 Board Part Number and Information

The following table lists the part number of this evaluation board (EVB) based on the MA35D16A887C microprocessors, and the PCB names of three parts: NuMaker-SOM-MA35D16A81 SOM board, NuMaker-BASE-MA35D1B1 base board and 7" TFT-LCD daughter board.

Part Number of EVB	SOM Board	BASE Board	7" TFT LCD Daughter Board
NuMaker-HMI-MA35D1-S1	NuMaker-SOM-MA35D16A81 V2.x	NuMaker-BASE-MA35D1B1 V2.x	NuMaker TFT-LCD7

Table 1-1 Board Part Number and Information

2 FEATURES

2.1 NuMaker-SOM-MA35D16A81 Features

- Target Chip: MA35D16A887C (BGA 312-Ball) MCP package with DDR3L (256 MB), which can run up to 800 MHz
- Power
 - DC 5V input from the NuMaker-BASE-MA35D1B1 board through the SOM high speed connector
 - PMIC DA9062-3A:
 - ◆ Four DC/DC: To supply 1.2V Core power, 1.2V CPU power, 1.35V DDR3L Memory power and 3.3V I/O power
 - ◆ Four LDO: To supply 3.0V RTC power, 1.8V I/O power, 2.5V PLL power and 3.3V/1.8V eMMC NAND Flash power
 - Battery input header (J48): Independent DC 3.3V input to V_{BAT} for RTC power (Optional)
- Memory Devices
 - An on-board eMMC NAND Flash memory device (16 GB)
- Two Gigabit Ethernet (RGMII) PHY devices
- Two 120-pin high speed connectors to connect with NuMaker-BASE-MA35D1B1 board
- One PMIC reset key button

2.2 NuMaker-BASE-MA35D1B1 Features

- Power:
 - 5V/2A Power Jack and Slide Switch
- Debug/Trace:
 - UART0 debug port: USB Virtual COM (VCOM) port
 - Debug/Trace ports: SWJ (JTAG+SWD), ETM and SWD connectors
- Memory Devices
 - An on-board Quad SPI NAND Flash device (512 MB)
 - An on-board NAND Flash device (1 GB)
 - Standard-SD (SD2.0) memory card slot
- One power-on setting DIP-Switch for evaluation booting source selection
- Two 120-pin high speed connectors to connect with NuMaker-SOM-MA35D16A81 board
- Two sets of Gigabit Ethernet ports: Two Gigabit Ethernet transformer devices and two RJ45 port connectors
- Two sets of high speed USB ports: One Host/Device port and one Host port
- Two camera capture (CMOS sensor) header connectors
- One LCM connector to connect with 7" 1024x600 LCD daughter board
- One audio codec with microphone input and speaker output
- One SIM card slot
- One External Bus Interface (EBI) header connector

- Two sets of UART transceivers and DB9 connectors
- Two sets of RS485 transceivers and header connectors
- Two sets of CAN FD transceivers and header connectors
- One 8-channel ADC header connector
- MEMS Microphone
- MEMS G-Sensor
- Three user key buttons
- Two user LEDs
- One set of buzzer pads
- One fan connector (Only supported in V2.1)

2.3 7" TFT LCD Daughter Board Features

- One LCD FPC connector to connect with 7" 1024x600 TFT LCD panel
- One 4-wire resistive touch FPC connector
- One connector to connect with NuMaker-BASE-MA35D1B1 board

3 HARDWARE CONFIGURATION

3.1 NuMaker-SOM-MA35D16A81 Board

3.1.1 Front View

Figure 3-1 shows the main components and connectors from the front side of NuMaker-SOM-MA35D16A81 board.

- Target Chip (U1): MA35D16A887C (BGA312) MCP package with DDR3L (256MB).

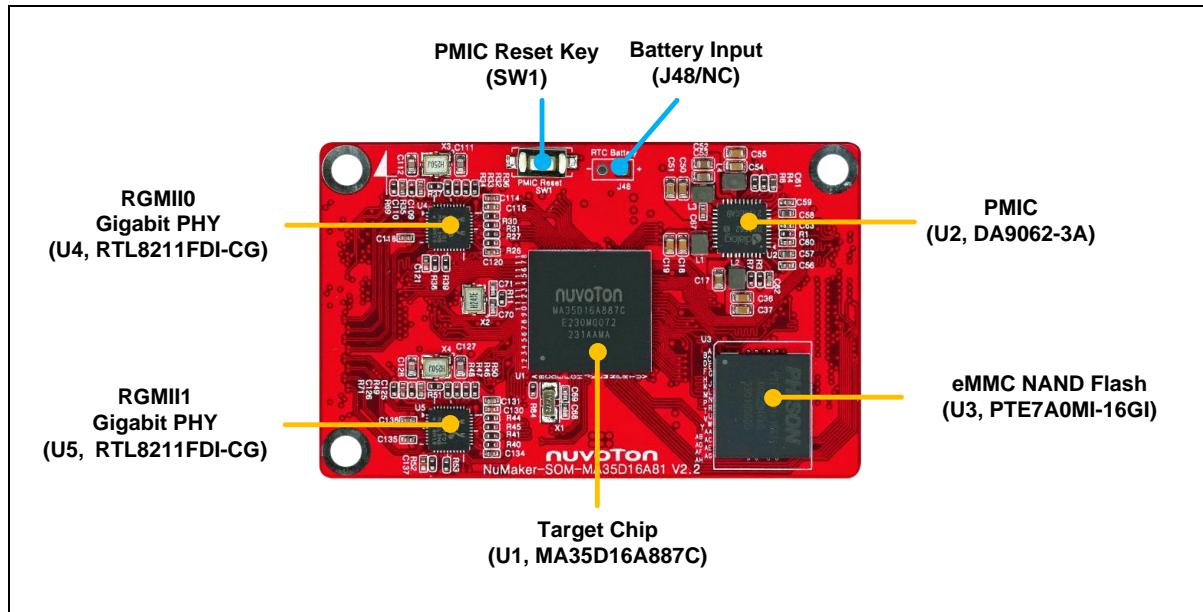

Figure 3-1 Front View of NuMaker-SOM-MA35D16A81

3.1.2 Rear View

Figure 3-2 shows the main components and connectors from the rear side of NuMaker-SOM-MA35D16A81 board.

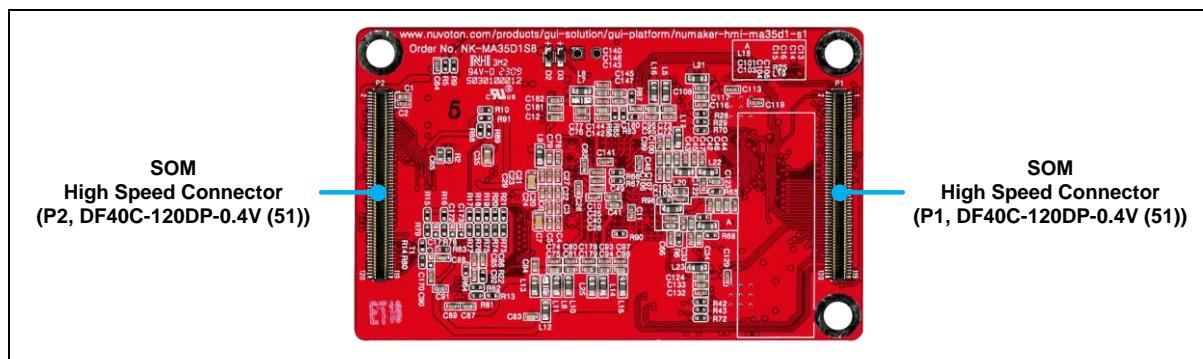

Figure 3-2 Rear View of NuMaker-SOM-MA35D16A81

3.1.3 Power Input

- 5V Input (P2.1~6): DC 5V power input for the NuMaker-SOM-MA35D16A81 board that supplied from the base board through the pin 1 to pin 6 of SOM high speed connector P2.

3.1.4 RTC Wake-up Control

- Battery Input Connector (J48): DC 3V battery input connector to provide an additional optional power to keep the RTC power from the V_{BAT} pin of MA35D1 when the system is power off.
- RTC Wake-up Control Pins: The RTC_RPWR and RTC_nRWAKE pins of MA35D1 are the RTC wake-up control pins to control the related DC/DC power whether output voltages or not. (This function is reserved due to both R88 and R90 resistors are mounted on board by default)

Pin No.	Pin Name of MA35D1	Function Description
U1.E7	RTC_RPWR* ¹	RTC wake-up output pin for external DC/DC (for example, the PMIC device DA9062-3A (U2) on this NuMaker-SOM-MA35D16A81 board) enable pin control.
U1.G5	RTC_nRWAKE* ^{2*3}	RTC wake-up interrupt input with internal pull-high
Note *1: This RTC_RPWR output pin of MA35D1 is not wired directly to the SYS_EN input pin (pin 30) of PMIC device DA9062-3A (U2) on this NuMaker-SOM-MA35D16A81 board by default. (The R88 resistor is mounted on board but R89 resistor is NC by default)		
Note *2: This RTC_nRWAKE input pin is wired directly to the RTC Wakeup key button (SW3, SW3 is not mounted on board in V2.1) on NuMaker-BASE-MA35D1B1 board and the R90 resistor is mounted on board by default.		
Note *3: This RTC_nRWAKE pin is internal pull-high. If user does not use the RTC wake-up interrupt function, please pull this pin to low (the R90 is mounted on board by default). In this condition, user also needs to disable the PWRST bit (RTC_PWRCTL[6]) of the RTC Power Control Register by clearing it for saving the RTC power consumption.		

Table 3-1 RTC Power Control Pins of MA35D1

3.1.5 PMIC

- PMIC Reset Key Button (SW1): Press this key to pull the nRESETREQ (pin 16) of PMIC device DA9062-3A (U2) low to reset this PMIC device to supply the output voltages and control the nRESET signal following the default power-on sequence stored in the internal configured initialization.
- PMIC (U2): After system power-on and pull the SYS_EN (pin 30) of the PMIC device DA9062-3A (U2) to high, the PMIC will follow the configured power-on sequence to supply all necessary and different voltages to the target chip MA35D16A887C and dedicated peripherals on this NuMaker-SOM-MA35D16A81 board, and release the nRESET signal from low to high at the last one sequence step.

U2.#	Pin Name	Output Voltage / MAX. Current
U2.26	VBUCK1	DC 1.2V ~ 1.34V / 2.5A
U2.27	VBUCK2	DC 1.2V / 2.5A
U2.25	VBUCK3	DC 3.3V / 2A
U2.24	VBUCK4* ¹	DC 1.35V or 1.8V / 2A
U2.1	VLDO1	DC 3V / 100mA
U2.2	VLDO2	DC 1.8V / 300mA
U2.9	VLDO3	DC 2.5V / 300mA

U2.11	VLDO4* ²	DC 3.3V or 1.8V / 300mA
Note *1: The output voltage of VBUCK4 depends on the status of U2.28 pin and to supply the voltage to the internal DDR memory and DDR PHY of the target chip MA35D16A887C (MCP package with DDR3L SDRAM memory). By default, the U2.28 pin is pull-down to force VBUCK4 pin of PMIC to output 1.35V on this NuMaker-SOM-MA35D16A81 board.		
Note *2: No connection (NC) by default. For more detailed information about how to change the output voltage on VLDO4, please refer to the PMIC DA9062-3A Application Note on Nuvoton website .		

Table 3-2 PMIC (U2) Output Voltage

U2.#	Pin Name	GPIO Function / Pin Name of MA35D1
U2.13	SDA	PMIC_I2C0_SDA / PD6* ¹
U2.14	SCL	PMIC_I2C0_SCL / PD7* ²
U2.37	nIRQ	PMIC_nIRQ / PA15* ³
U2.30	SYS_EN* ⁴	RTC_RPWR* ^{5*6}

Note *1: This PD6 pin is dedicated as PMIC_I2C0_SDA function for controlling external PMIC by default.

Note *2: This PD7 pin is dedicated as PMIC_I2C0_SCL function for controlling external PMIC by default.

Note *3: This PA15 pin is dedicated as PMIC_nIRQ input function from external PMIC by default.

Note *4: This SYS_EN input pin of PMIC device DA9062-3A (U2) can be controlled by RTC_RPWR output of MA35D1, but this SYS_EN pin is pulled-up on this NuMaker-SOM-MA35D16A81 board by default and it is not controllable by MA35D1 chip. (The R88 resistor is mounted on board but R89 resistor is NC by default)

Note *5: This RTC_RPWR output pin state of MA35D1 is controlled by RTC internal logic and the RTC_nRWAKE input pin state of the target chip MA35D16A887C. The RTC_nRWAKE input pin is pulled-down directly on this NuMaker-SOM-MA35D16A81 board. (The R90 resistor is mounted on board by default)

Note *6: Although the RTC_nRWAKE input pin is wired directly to the RTC Wake-up key (SW3) on NuMaker-BASE-MA35D1B1 board, but it does not need to press the SW3 key button to pull RTC_nRWAKE pin to low after supplied power to this NuMaker-BASE-MA35D1B1 board. (SW3 is NC in V2.1)

Table 3-3 PMIC (U2) Control Pins

3.1.6 eMMC NAND Flash

- eMMC1 NAND Flash Memory Device (U3): An on-board eMMC NAND Flash memory device (PTE7A0MI-16GI, 16 GB) for optional booting source. The booting source depends on the Power-on Setting by the status of DIP Switch (SW4) on the NuMaker-BASE-MA35D1B1 board.

Function Name	GPIO pin of MA35D1
eMMC1_DAT4	PJ0
eMMC1_DAT5	PJ1

eMMC1_DAT6	PJ2
eMMC1_DAT7	PJ3
-	PJ4* ¹
-	PJ5* ^{1*2}
eMMC1_CMD	PJ6
eMMC1_CLK	PJ7
eMMC1_DAT0	PJ8
eMMC1_DAT1	PJ9
eMMC1_DAT2	PJ10
eMMC1_DAT3	PJ11

Note *1: No connection (NC) by default.

Note *2: It is necessary to pull the PJ5 pin (SD1_nCD) to low when these PJ0~PJ3 and PJ6~PJ11 pins (eMMC1_xxx) are used to connect with eMMC device and act as the booting source.

Table 3-4 eMMC1 NAND Flash Device (U3) Pin Function

3.1.7 RGMII Gigabit PHY

- RGMII0 Gigabit PHY (U4): The RGMII0 MAC of MA35D1 needs an external Gigabit PHY (RTL8211FDI) to transform signal and pass these 4-pair differential signals to the Ethernet transformer on NuMaker-BASE-MA35D1B1 board through the SOM high speed connector P1.

Function Name	GPIO pin of MA35D1
RGMII0_MDC	PE0
RGMII0_MDIO	PE1
RGMII0_TXCTL	PE2
RGMII0_RXD0	PE3
RGMII0_RXD1	PE4
RGMII0_RXCLK	PE5
RGMII0_RXCTL	PE6
RGMII0_RXD0	PE7
RGMII0_RXD1	PE8
RGMII0_RXD2	PE9
RGMII0_RXD3	PE10
RGMII0_TXCLK	PE11
RGMII0_RXD2	PE12

RGMII0_TXD3	PE13
-------------	------

Table 3-5 RGMII0 PHY (U4) Pin Function

- RGMII1 Gigabit PHY (U5): The RGMII1 MAC of MA35D1 needs an external Gigabit PHY (RTL8211FDI) to transform signal and pass these 4-pair differential signals to the Ethernet transformer on NuMaker-BASE-MA35D1B1 board through the SOM high speed connector P1.

Function Name	GPIO pin of MA35D1
RGMII1_MDC	PF0
RGMII1_MDIO	PF1
RGMII1_TXCTL	PF2
RGMII1_TXD0	PF3
RGMII1_TXD1	PF4
RGMII1_RXCLK	PF5
RGMII1_RXCTL	PF6
RGMII1_RXD0	PF7
RGMII1_RXD1	PF8
RGMII1_RXD2	PF9
RGMII1_RXD3	PF10
RGMII1_TXCLK	PF11
RGMII1_TXD2	PF12
RGMII1_TXD3	PF13

Table 3-6 RGMII1 PHY (U5) Pin Function

3.1.8 High Speed Connectors

- SOM High Speed Connectors (P1 and P2): Two 120-pin high speed connectors (DF40C-120DP-0.4V (51)) to connect with the NuMaker-BASE-MA35D1B1 board.

3.2 NuMaker-BASE-MA35D1B1 Board

3.2.1 Front View

Figure 3-3 shows the main components and connectors from the front side of NuMaker-BASE-MA35D1B1 board.

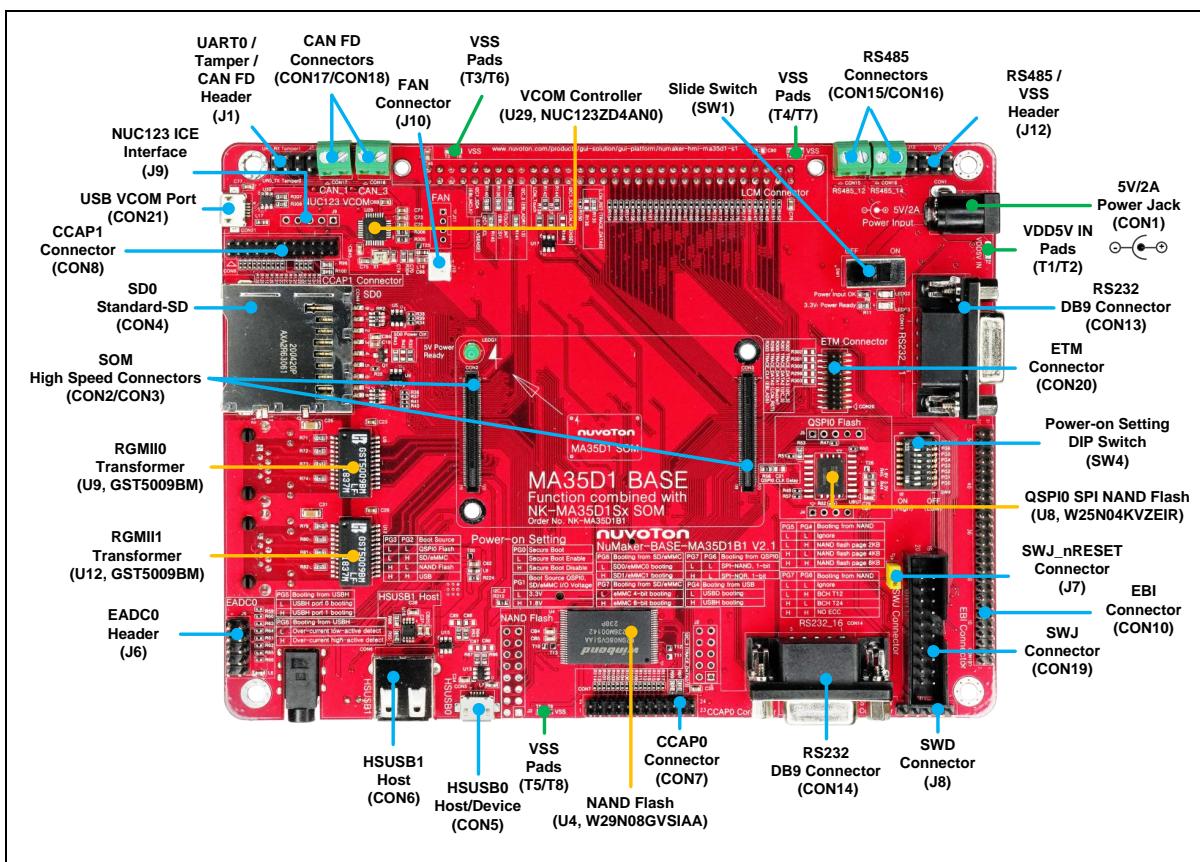

Figure 3-3 Front View of NuMaker-BASE-MA35D1B1

3.2.2 Rear View

Figure 3-4 shows the main components and connectors from the rear side of NuMaker-BASE-MA35D1B1 board.

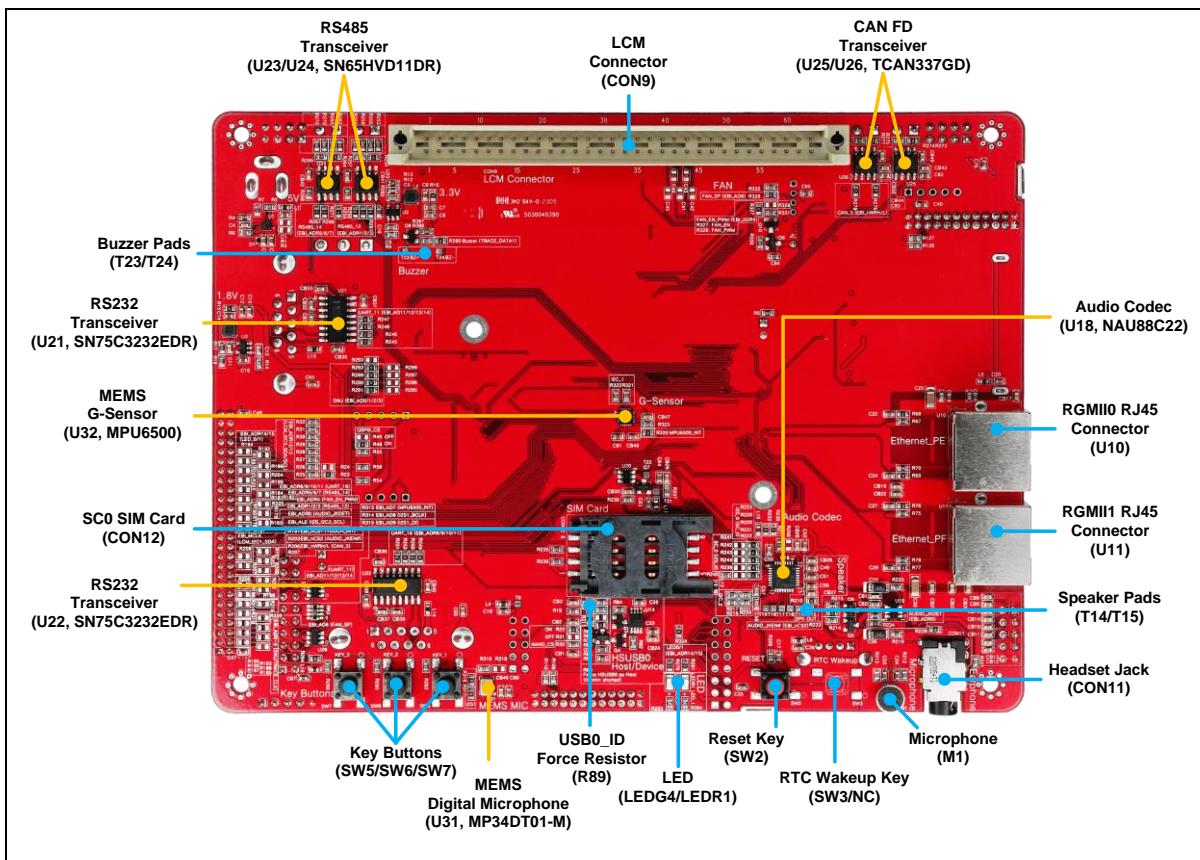

Figure 3-4 Rear View of NuMaker-BASE-MA35D1B1

3.2.3 Power and Ground

- 5V Power Jack (CON1): This power jack needs to connect an extra adapter to supply DC 5V/2A power input for this NuMaker-BASE-MA35D1B1 board.
- VDD5V_IN Pads (T1 and T2): Optional to supply 5V power input for this NuMaker-BASE-MA35D1B1 board.
- GND Pads (T3~T8): The ground pads of this NuMaker-BASE-MA35D1B1 board.
- Slide Switch (SW1): To switch the input 5V voltage to supply power to this NuMaker-BASE-MA35D1B1 board.

3.2.4 High Speed Connectors

- SOM High Speed Connectors (CON2 and CON3): Two 120-pin high speed connectors (DF40C-120DS-0.4V (51)) to connect with the NuMaker-SOM-MA35D16A81 board.

Pin No.	GPIO of MA35D1 or Function pin	Pin No.	GPIO of MA35D1 or Function pin

Table 3-10 SOM Connector 2 (CON3) Pin Function

3.2.5 QSPI Flash

- QSPI0 Flash (U8): Winbond SPI NAND Flash (W25N04KWZEIR, 512 MB) for optional booting source, supporting dual / quad mode.

Pin No.	Pin Name	GPIO pin of MA35D1	Default Connected R#

1	QSPI0_SS0	PD0	R47
2	QSPI0_MISO0	PD3	R50
3	QSPI0_MOSI1	PD4	R51
4	VSS	-	-
5	QSPI0_MOSI0	PD2	R49
6	QSPI0_CLK	PD1	R57
7	QSPI0_MISO1	PD5	R52
8	QSPI0_VDD*		

Note *: The power group of these GPIO PD0~PD5 belongs to the VDDIO5 power domain of MA35D1 series, the default voltage of VDDIO5 (power input VDD_QSPI0) is VDD1V8 (DC 1.8V) on the NuMaker-SOM-MA35D16A81 board. Please make sure the power group voltage of these GPIO PD0~PD5 pins is set at the equal voltage 1.8V on both NuMaker-SOM-MA35D16A81 board and NuMaker-BASE-MA35D1B1 board.

Table 3-11 QSPI0 Flash (U8) Pin Function

3.2.6 NAND Flash

- NAND Flash (U4): Winbond NAND Flash (W29N08GVSIAA, 1 GB) for optional booting source.

Function Name	GPIO pin of MA35D1
NAND_DATA0	PA0
NAND_DATA1	PA1
NAND_DATA2	PA2
NAND_DATA3	PA3
NAND_DATA4	PA4
NAND_DATA5	PA5
NAND_DATA6	PA6
NAND_DATA7	PA7
NAND_RDY	PA8

NAND_nWE	PA10
NAND_CLE	PA11
NAND_ALE	PA12
NAND_nCS	PA13
NAND_nWP	PA14

Table 3-12 NAND Flash (U4) Pin Function

3.2.7 SD Card Slot

- SD0 Standard-SD Card Slot (CON4): Support SD0 (SD2.0) for optional booting source.

Pin No.	Pin Name	GPIO pin of MA35D1	Default Connected R#
1	SD0_DTA3	PC5	R39
2	SD0_CMD	PC0	R34
3	VSS	-	-
4	VDD3V3	-	-
5	SD0_CLK	PC1	R35
6	VSS	-	-
7	SD0_DAT0	PC2	R36
8	SD0_DAT1	PC3	R37
9	SD0_DTA2	PC4	R38
10	SD0_nCD	PC6* ³	R40
11	SD0_WP	PC7	R41
12	VSS	-	-
13	HOLD	-	-
14	HOLD	-	-
15* ¹	SD0_PWR_CTRL#	PD14	R42* ²

Note *1: This pin does not belong to the SD0 Standard-SD card slot.

Note *2: Optional GPIO PD14 can control the power of SD0 Standard-SD card slot, but this function is disabled (R42 is NC, No Connection) by default, the power of SD0 Standard-SD card slot is always ON.

Note *3: It is necessary to pull the PC6 pin (SD0_nCD) to low when these PC0~PC5 pins (eMMC0_xxx) are used to connect with eMMC device and act as the booting source.

Table 3-13 SD0 Standard-SD Card Slot (CON4) Pin Function

3.2.8 HS USB2.0 Connectors

- HSUSB0 Host/Device (CON5, USB Micro-AB Receptacle): HSUSB0 can act as an USB Host or Device that depends on the ID pin state of plugged-in USB cable or always acts as Host by shorting with a 0-ohm resistor on the R89 (NC by default) to force the ID pin of HSUSB0 at low state.
- HSUSB1 Host (CON6, USB Type-A Receptacle): HSUSB1 for USB Host with type-A connector.
- USB0_ID Resistor (R89): Optional to pull-down the ID pin of HSUSB0 by mounting a resistor (R89) to force HSUSB0 to always act as an USB Host.

3.2.9 Power-on Setting

- Power-on Setting DIP Switch (SW4): The GPIO PG0, PG1, PG2, PG3, PG4, PG5, PG6 and PG7 determine how to boot the evaluation environment on the NuMaker-BASE-MA35D1B1 board. These GPIO pins are internal weakly pull-down.

- Options for enabling or disabling secure booting:

SW4.1 / PG0*	Secure Booting
Low	Enable
High	Disable

Note *: The GPIO PG0 is internal weakly pull-down.

Table 3-14 Secure Boot Options

- Options for booting source QSPI0 and SD/eMMC IO voltage selection:

SW4.2 / PG1*	Bootin Source QSPI0 and SD/eMMC IO Voltage
Low	3.3 V
High	1.8 V

Note *: The GPIO PG1 is internal weakly pull-down.

Table 3-15 Booting Source QSPI0 and SD/eMMC IO Voltage Options

- Options for booting source selection:

SW4.4 / PG3* ¹	SW4.3 / PG2* ¹	Bootin Source
Low	Low	QSPI0 Flash
Low	High	SD/eMMC* ²
High	Low	NAND Flash
High	High	USB

Note *¹: These GPIO PG2 and PG3 are internal weakly pull-down.

Note *²: The eMMC1 NAND Flash memory device is on the NuMaker-SOM-MA35D16A81 board.

Table 3-16 Booting Source Options

- Options for booting from NAND Flash device:

SW4.6 / PG5*	SW4.5 / PG4*	Boot from NAND Flash
Low	Low	Ignore
Low	High	NAND Page = 2KB
High	Low	NAND Page = 4KB
High	High	NAND Page = 8KB

Note *: These GPIO PG4 and PG5 are internal weakly pull-down.

Table 3-17 Page Size Options for NAND Flash Booting Source

SW4.8 / PG7*	SW4.7 / PG6*	Boot from NAND Flash

Low	Low	Ignore
Low	High	BCH T12
High	Low	BCH T24
High	High	NO ECC

Note *: These GPIO PG6 and PG7 are internal weakly pull-down.

Table 3-18 ECC Options for NAND Flash Booting Source

- Options for booting from SD0/1 card or eMMC0/1 NAND Flash memory device:

SW4.7 / PG6* ¹	Boot from SD/eMMC
Low	SD0/eMMC0 Boot
High	SD1/eMMC1 Boot ^{*2}

Note *1: The GPIO PG6 is internal weakly pull-down.

Note *2: The eMMC1 NAND Flash memory device is on the NuMaker-SOM-MA35D16A81 board.

Table 3-19 Options for SD Card 0/1 or eMMC 0/1 NAND Flash Device Booting Source

SW4.8 / PG7* ¹	Boot from SD/eMMC
Low	eMMC 4-bit Booting ^{*2}
High	eMMC 8-bit Booting ^{*2}

Note *1: The GPIO PG7 is internal weakly pull-down.

Note *2: The eMMC1 NAND Flash memory device is on the NuMaker-SOM-MA35D16A81 board.

Table 3-20 4/8-bit Options for eMMC NAND Flash Device Booting Source

- Options for booting from QSPI0 Flash device:

SW4.8 / PG7* ¹	SW4.7 / PG6* ¹	Boot from QSPI0 Flash
Low	Low	SPI NAND 1-bit ^{*2}
High	Low	SPI NOR 1-bit ^{*2}

Note *1: These GPIO PG6 and PG7 are internal weakly pull-down.

Note *2: Only SPI NAND Flash memory device (U8 only by default) is on this NuMaker-BASE-MA35D1B1 board.

Table 3-21 1-bit Options for QSPI0 NAND/NOR Flash Booting Source

- Options for booting from USBD or USBH:

SW4.5 / PG4* ¹	Boot from USB
Low	USB Device Booting

High	USB Host Booting ^{*2}
Note ^{*1} : The GPIO PG4 is internal weakly pull-down.	
Note ^{*2} : It does not support the USB Host booting source on this NuMaker-HMI-MA35D1-S1 board.	

Table 3-22 Options for USBD or USBH Booting Source

SW4.6 / PG5 ^{*1}	Boot from USBH ^{*2}
Low	USBH Port 0 Booting
High	USBH Port 1 Booting

Note ^{*1}: The GPIO PG5 is internal weakly pull-down.**Note** ^{*2}: It does not support the USB Host booting source on this NuMaker-HMI-MA35D1-S1 board.

Table 3-23 USBH Port 0/1 Options for USBH Booting Source

SW4.7 / PG6 ^{*1}	Boot from USBH ^{*2}
Low	Over-current Low-active Detect
High	Over-current High-active Detect

Note ^{*1}: The GPIO PG6 is internal weakly pull-down.**Note** ^{*2}: It does not support the USB Host booting source on this NuMaker-HMI-MA35D1-S1 board.

Table 3-24 Over-current High/Low-active Detect Options for USBH Booting Source

3.2.10 Gigabit Ethernet Transformers and RJ45 Ports

- RGMII0 Gigabit Ethernet Transformer (U9): Gigabit Ethernet transformer (GST5009BM) to isolate the differential signals from the Gigabit PHY device on the NuMaker-SOM-MA35D16A81 board through the SOM connector CON2 and pass these signals to the Ethernet network through the RJ45 connector (U10).
- RGMII1 Gigabit Ethernet Transformer (U12): Gigabit Ethernet transformer (GST5009BM) to isolate the differential signals from the Gigabit PHY device on the NuMaker-SOM-MA35D16A81 board through the SOM connector CON2 and pass these signals to the Ethernet network through the RJ45 connector (U11).
- RGMII0 RJ45 Connector (U10): The Gigabit Ethernet RGMII0 RJ45 connector.
- RGMII1 RJ45 Connector (U11): The Gigabit Ethernet RGMII1 RJ45 connector.

3.2.11 CMOS Sensor Capture Connectors

- CCAP0 Connector (CON7): This connector is used to connect CMOS sensor for image capture application through the CCAP0 (Camera Capture 0) interface.

Pin No.	Pin Name	GPIO pin of MA35D1	Default Connected R#	Conflict Function / R#
1	VSS	-	-	-

Table 3-27 EBI Connector (CON10) Pin Function

3.2.13 EADC Header

- EADC0 Header (J6): The EADC0 analog channel input header.

Pin No.	Pin Name	Pin Name of MA35D1	Default Connected R#
1	EADC_CH0	EADC_CH0	R59
2	EADC_CH2	EADC_CH2	R63
3	EADC_CH4	EADC_CH4	R60
4	EADC_CH6	EADC_CH6	R64
5	EADC_CH1	EADC_CH1	R61
6	EADC_CH3	EADC_CH3	R65
7	EADC_CH5	EADC_CH5	R62
8	EADC_CH7	EADC_CH7	R66
9	AVSS_E*	-	-
10	AVSS_E*	-	-

Note *: AVSS_E is the EADC0 analog ground.

Table 3-28 EADC0 Header (J6) Pin Function

3.2.14 UART

- UART0 Port, Ground VSS and Tamper Pin Header (J1, supported in V2.0): This header includes the TXD/RXD pins of UART0, the ground VSS pins, and the tamper pins (TAMPER0, TAMPER1).

Pin No.	Pin Name	GPIO pin of MA35D1
1	UR0_TX	PE14
2	UR0_RX	PE15*
3	VSS	-
4	VSS	-
5	TAMPER0	PH8
6	TAMPER1	PH9

Note *: The GPIO PE15 (UART0_RXD) pin must be pulled to high level through an external resistor or an internal pull-up resistor in the external device (such as a transceiver or MCU).

Table 3-29 UART0, Ground VSS and Tamper Pin Header (J1) Pin Function (V2.0)

- UART0 Port, Tamper Pin, CAN1_H/L and CAN3_H/L Header (J1, supported in V2.1): This header includes the TXD/RXD pins of UART0, the tamper pins (TAMPER0, TAMPER1), CAN1_H/L pins and CAN3_H/L pins.

Pin No.	Pin Name	GPIO pin of MA35D1

1	UR0_TX	PE14
2	UR0_RX	PE15*
3	TAMPER0	PH8
4	TAMPER1	PH9
5	CAN1_H	-
6	CAN3_H	-
7	CAN1_L	-
8	CAN3_L	-

Note *: The GPIO PE15 (UART0_RXD) pin must be pulled to high level through an external resistor or an internal pull-up resistor in the external device (such as a transceiver or MCU).

Table 3-30 UART0, Tamper Pin, CAN1_H/L and CAN3_H/L Header (J1) Pin Function (V2.1)

- RS232 Transceiver (U21) and DB9 Connector (CON13): The UART11 transceiver (SN75C3232EDR) and DB9 connector.

Function Name	GPIO pin of MA35D1	Default Connected R#	Conflict Function / R#
UR11_nCTS	PL0	R245	EBI_AD11 / R196*
UR11_nRTS	PL1	R246	EBI_AD12 / R198*
UR11_RXD	PL2	R247	EBI_AD13 / R200*
UR11_TXD	PL3	R248	EBI_AD14 / R202*

Note *: No connection (NC) by default.

Table 3-31 UART11 (U21, CON13) Pin Function

- RS232 Transceiver (U22) and DB9 Connector (CON14): The UART16 transceiver (SN75C3232EDR) and DB9 connector.

Function Name	GPIO pin of MA35D1	Default Connected R#	Conflict Function / R#
UR16_nCTS	PK0	R249	EBI_ADR8 / R199*
UR16_nRTS	PK1	R250	EBI_ADR9 / R201*
UR16_RXD	PK2	R251	EBI_ADR10 / R204*
UR16_TXD	PK3	R252	EBI_ADR11 / R205*

Note *: No connection (NC) by default.

Table 3-32 UART16 (U22, CON14) Pin Function

3.2.15 RS485

- RS485 Transceiver (U23) and Connector (CON15): The UART12 transceiver (SN65HVD11DR)

and connector.

Function Name	GPIO pin of MA35D1	Default Connected R#	Conflict Function / R#
UR12_nRTS	PI1	R256	EBI_ADR1 / R178*
UR12_RXD	PI2	R259	EBI_ADR2 / R179*
UR12_TXD	PI3	R261	EBI_ADR3 / R180*

Note *: No connection (NC) by default.

Table 3-33 UART12 (U23, CON15) Pin Function

- RS485 Transceiver (U24) and Connector (CON16): The UART14 transceiver (SN65HVD11DR) and connector.

Function Name	GPIO pin of MA35D1	Default Connected R#	Conflict Function / R#
UR14_nRTS	PI5	R266	EBI_ADR5 / R181*
UR14_RXD	PI6	R267	EBI_ADR6 / R182*
UR14_TXD	PI7	R271	EBI_ADR7 / R184*

Note *: No connection (NC) by default.

Table 3-34 UART14 (U24, CON16) Pin Function

- RS485 Transceiver A/B I/O and Ground VSS Header (J12, only supported in V2.1): This header includes the RS485 transceiver I/O pins A3_1, B3_1, A3_2, B3_2, and Ground VSS pins.

Pin No.	Pin Name	Pin No.	Pin Name
1	B3_1	2	B3_2
3	A3_1	4	A3_2
5	VSS	6	VSS
7	VSS	8	VSS

Table 3-35 RS485 Transceiver A/B I/O and Ground VSS Header (J12) Pin Function (V2.1)

3.2.16 CAN FD

- CAN Transceiver (U25) and Connector (CON17): The CAN1 transceiver (TCAN337GDR) and connector.

Function Name	GPIO Pin of MA35D1
CAN1_RXD	PL14
CAN1_TXD	PL15

Table 3-36 CAN1 (U25, CON17) Pin Function

- CAN Transceiver (U26) and Connector (CON18): The CAN3 transceiver (TCAN337GDR) and connector.

connector.

Function Name	GPIO pin of MA35D1	Default Connected R#	Conflict Function / R#
CAN3_RXD	PL10	R276	EBI_nWRH / R206*
CAN3_TXD	PL11	R278	EBI_nWRL / R207*
Note *: No connection (NC) by default.			

Table 3-37 CAN3 (U26, CON18) Pin Function

3.2.17 SWJ, SWD and ETM

- SWJ_nRESET Connector (J7): A jumper is needed if SWJ_nRESET should be connected with nRESET signal.
- SWJ Interface (CON19): Arm JTAG and SWD interface for tracing or debugging code.

Pin No.	Pin Name	GPIO pin of MA35D1	Default Connected R#	Conflict Function / R#
	VDD3V3	-	-	-
2	VDD3V3	-	-	-
3	JTAG_nTRST	PG15*2	R294	EBI_AD4 / R193*1
4	VSS	-	-	-
5	JTAG_TDI	PG14*2	R292	EBI_AD3 / R190*1
6	VSS	-	-	-
7	JTAG_TMS / SW_DIO	PG13*2	R291	EBI_AD2 / R189*1
8	VSS	-	-	-
9	JTAG_TCK / SW_CLK	PG12*2	R290	EBI_AD1 / R187*1
10	VSS	-	-	-
11	VSS	-	-	-
12	VSS	-	-	-
13	JTAG_TDO	PG11*2	R289	EBI_AD0 / R185*1
14	VSS	-	-	-
15	SWJ_nRESET	nRESET	J7	-
16	VSS	-	-	-
17	-	-	-	-
18	VSS	-	-	-

19	-	-	-	-
20	VSS	-	-	-

Note *1: No connection (NC) by default.

Note *2: When the chip enters debug mode, these GPIO PG11 ~ PG15 pins will be automatically forced to JTAG and SWD functionality by hardware, and other pinout functions of these GPIO pins will be disabled.

Table 3-38 SWJ Interface (CON19) Pin Function

- SWD Interface (J8): Arm SWD (Serial Wire Debug) interface for tracing or debugging code.

Pin No.	Pin Name	GPIO pin of MA35D1	Default Connected R#	Conflict Function / R#
1	VDD3V3	-	-	-
2	SW_DIO	PG13*2	R291	EBI_AD2 / R189*1
3	SW_CLK	PG12*2	R290	EBI_AD1 / R187*1
4	SWJ_nRESET	nRESET	J7	-
5	VSS	-	-	-

Note *1: No connection (NC) by default.

Note *2: When the chip enters debug mode, these GPIO PG11 ~ PG15 pins will be automatically forced to JTAG and SWD functionality by hardware, and other pinout functions of these GPIO pins will be disabled.

Table 3-39 SWD Interface (J8) Pin Function

- ETM Interface (CON20): Arm ETM (Embedded Trace Macrocell) interface is an optional debug component that enables reconstruction of program execution.

Pin No.	Pin Name	GPIO pin of MA35D1	Default Connected R#	Conflict Function / R#

18	TRACE_DATA2	PM14	R301 ^{*1}	CCAP0_I2C3_SDA / R97
19	VSS	-	-	-
20	TRACE_DATA3	PM15	R302 ^{*1}	CCAP0_I2C3_SCL / R99

Note *1: No connection (NC) by default.

Note *2: When the chip enters debug mode, these GPIO PG11 ~ PG15 pins will be automatically forced to JTAG and SWD functionality by hardware, and other pinout functions of these GPIO pins will be disabled.

Table 3-40 ETM Interface (CON20) Pin Function

3.2.18 USB Virtual COM (VCOM) Port

- USB VCOM Port (CON21, USB Micro-AB Receptacle): The microcontroller NUC123ZD4AN0 (U29) acts as an USB VCOM device to communicate data between the UART0 port of MA35D1 series and USB host of PC. An USB cable should be connected with this micro-B connector (CON21) and should be plugged-in the PC host to display the debug messages on PC. (Optional)

Note: The GPIO PE15 (UART0_RXD) pin must be pulled to high level through an external resistor or an internal pull-up resistor in the external device (such as a transceiver or MCU).
- VCOM Controller (U29): The microcontroller NUC123ZD4AN0 (U29) acts as an USB VCOM device to communicate data between the UART0 port of MA35D1 chip and USB host of PC.
- NUC123 ICE Interface (J9): The ICE interface of NUC123ZD4AN0 microcontroller (U29) for programming the internal Flash of NUC123 MCU. The internal Flash of NUC123 MCU had been programmed and acts as an USB VCOM device before this NuMaker-BASE-MA35D1B1 board be delivered by Nuvoton.

Pin No.	Pin Name	Functions
1	VCOM_3.3V	DC 3.3V
2	N123_ICE_DAT	SWD data pin of NUC123
3	N123_ICE_CLK	SWD clock pin of NUC123
4	N123_nRST	Reset pin of NUC123
5	VSS	Ground

Table 3-41 NUC123 ICE Interface (J9) Pin Function

3.2.19 Reset and RTC Wake-up Key Buttons

- Reset Key Button (SW2): Press this key to reset the MA35D1 target chip on the NuMaker-SOM-MA35D16A81 board.
- RTC Wake-up Key Button (SW3): Press this key to wake up the MA35D1 target chip on the NuMaker-SOM-MA35D16A81 board from standby state. (This function is reserved in V2.0 and the SW3 key button is not mounted on board in V2.1)

3.2.20 TFT LCD Connector

- LCM Connector (CON9):

Pin No.	Pin Name	GPIO pin of MA35D1	Default Connected R#	Conflict Function / R#

Table 3-42 LCM Connecor (CON9) Pin Function

3.2.21 Audio Codec

- Speaker Pads (T14 and T15): To connect a speaker to output audio sound.
- Microphone (M1): An on-board microphone for audio sound input.
- Headset Jack (CON11): A headset input jack that follows CTIA definition.
- Audio Codec Device (U18): Nuvoton NAU88C22YG is audio codec device that integrates microphone input, speaker output and headphone output for audio application on this NuMaker-BASE-MA35D1B1 board.

Function Name	GPIO pin of MA35D1	Default Connected R#	Conflict Function / R#
I2S0_MCLK	PN15	R222	SC0_nCD / R239*
I2S0_LRCK	PK12	R223	SC0_CLK / R241*
I2S0_BCLK	PK13	R226	SC0_DAT / R242*
I2S0_DI	PK14	R229	SC0_RST / R243*
I2S0_DO	PK15	R231	SC0_PWR / R244*

Note *: No connection (NC) by default.

Table 3-43 I2S0 (U18) Pin Function

Function Name	GPIO pin of MA35D1	Default Connected R#	Conflict Function / R#

I2S_I2C2_SDA	PB8	R220	-
I2S_I2C2_SCL	PB9	R312/R221	EBI_ALE / R191*
Note *: No connection (NC) by default.			

Table 3-44 I2C2 (U18) Pin Function

Function Name	GPIO pin of MA35D1	Default Connected R#	Conflict Function / R#
AUDIO_JKEN#	PD13	R233	EBI_nCS2 / R203*
AUDIO_JKDET	PI0	R234	EBI_ADR0 / R183*
Note *: No connection (NC) by default.			

Table 3-45 Audio Codec (U18) Control Pin Function

3.2.22 SIM Card Slot

- SC0 SIM Card (CON12): SIM card slot for SC0.

Function Name	GPIO pin of MA35D1	Default Connected R#	Conflict Function / R#
SC0_nCD	PN15	R239*	I2S0_MCLK / R222
SC0_CLK	PK12	R241*	I2S0_LRCK / R223
SC0_DAT	PK13	R242*	I2S0_BCLK / R226
SC0_RST	PK14	R243*	I2S0_DI / R229
SC0_PWR	PK15	R244*	I2S0_DO / R231
Note *: No connection (NC) by default.			

Table 3-46 SC0 SIM Card Connector (CON12) Pin Function

3.2.23 Key Buttons, LEDs, Buzzer and Fan Control

- User-defined Key Buttons (KEY_1, KEY_2 and KEY_3):

KEY_#	SW#	GPIO pin of MA35D1	Pull-up Power
KEY_1	SW5	PD8	DC 3.3V
KEY_2	SW6	PD9	DC 3.3V
KEY_3	SW7	PF14	DC 1.8V*

Note *: The power group of this GPIO PF14 pin belongs to the VDDIO9 power domain of MA35D1 series, the default voltage of VDDIO9 (power input F_VDDIO) is VDD1V8 (DC 1.8V) on the NuMaker-SOM-MA35D16A81 board. Please make sure the power group voltage of this GPIO PF14 pin is set at the equal voltage 1.8V on both NuMaker-SOM-MA35D16A81 board and NuMaker-BASE-MA35D1B1 board.

Table 3-47 Key Buttons (KEY_1, KEY_2 and KEY_3) Pin Function

- User Indication LEDs (LED_0 and LED_1):

LED #	Function / Color	GPIO pin of MA35D1	Default Connected R#	Conflict Function / R#
LED_0	LEDG4 / Green	PJ14	R279	EBI_ADR14 / R192*
LED_1	LEDR1 / Red	PJ15	R281	EBI_ADR15 / R194*

Note *: No connection (NC) by default.

Table 3-48 LEDs (LED_0 and LED_1) Pin Function

- Buzzer Pads (T23 and T24): To connect a buzzer to output sound.
- Fan Control (FAN_EN, FAN_PWM and FAN_SP): To turn on or turn off the fan by FAN_EN (PI4) pin high or low state. (only supported in V2.1)

Function Name	GPIO pin of MA35D1	Default Connected R#	Conflict Function / R#
FAN_EN	PI4	R327	EBI_ADR4 / R325*
FAN_PWM	PI4	R328*	EBI_ADR4 / R325*
FAN_SP	PL7	R329	EBI_AD6 / R326*

Note *: No connection (NC) by default.

Table 3-49 Fan Control (FAN_EN, FAN_PWM and FAN_SP) Pin Function (V2.1)

- 2-pin Fan Connector (J10, only supported in V2.1):

Pin No.	Pin Name	Function	GPIO pin of MA35D1	Type
1	VSS	GND	-	Power
2	VDD5V	Controlled DC 5V by FAN_EN	PI4	Output

Table 3-50 2-pin Fan Connector (J10) Pin Function (V2.1)

- 4-pin Fan Connector (J11, only supported in V2.1): This connector is NC by default.

Pin No.	Pin Name	Function	GPIO pin of MA35D1	Type
1	VSS	GND	-	Power
2	VDD5V	Fixed DC 5V	-	Power
3	FAN_SP	Fan speed signal	PL7	Input
4	FAN_PWM	Fan PWM signal	PI4	Output

Table 3-51 4-pin Fan Connector (J11) Pin Function (V2.1)

3.2.24 MEMS Digital Microphone

- MEMS Digital Microphone (U31): The MP34DT01-M is a digital MEMS microphone.

Function Name	GPIO pin of MA35D1	Default Connected R#	Conflict Function / R#
I2S1_BCLK	PL9	R316	EBI_AD8 / R314*
I2S1_DI	PD10	R317	EBI_AD9 / R315*
Note *: No connection (NC) by default.			

Table 3-52 MEMS Digital Microphone (U31) Pin Function

3.2.25 MEMS G-Sensor

- MEMS G-Sensor (U32): The MPU6500 is a 6-axis motion tracking device that combines a 3-axis gyroscope, 3-axis accelerometer.

Function Name	GPIO pin of MA35D1	Default Connected R#	Conflict Function / R#
I2C1_SDA	PB10	R140	-
I2C1_SCL	PB11	R145	LCM_VSENSE / R146*
MPU6500_INT	PL8	R320	EBI_AD7 / R313*
Note *: No connection (NC) by default.			

Table 3-53 MEMS G-Sensor (U32) Pin Function

3.3 7" TFT LCD Daughter Board

3.3.1 Front View

Figure 3-5 shows the main components from the front view of 7" TFT LCD daughter board and an on-board 7" 4-wire resistive touch TFT LCD panel.

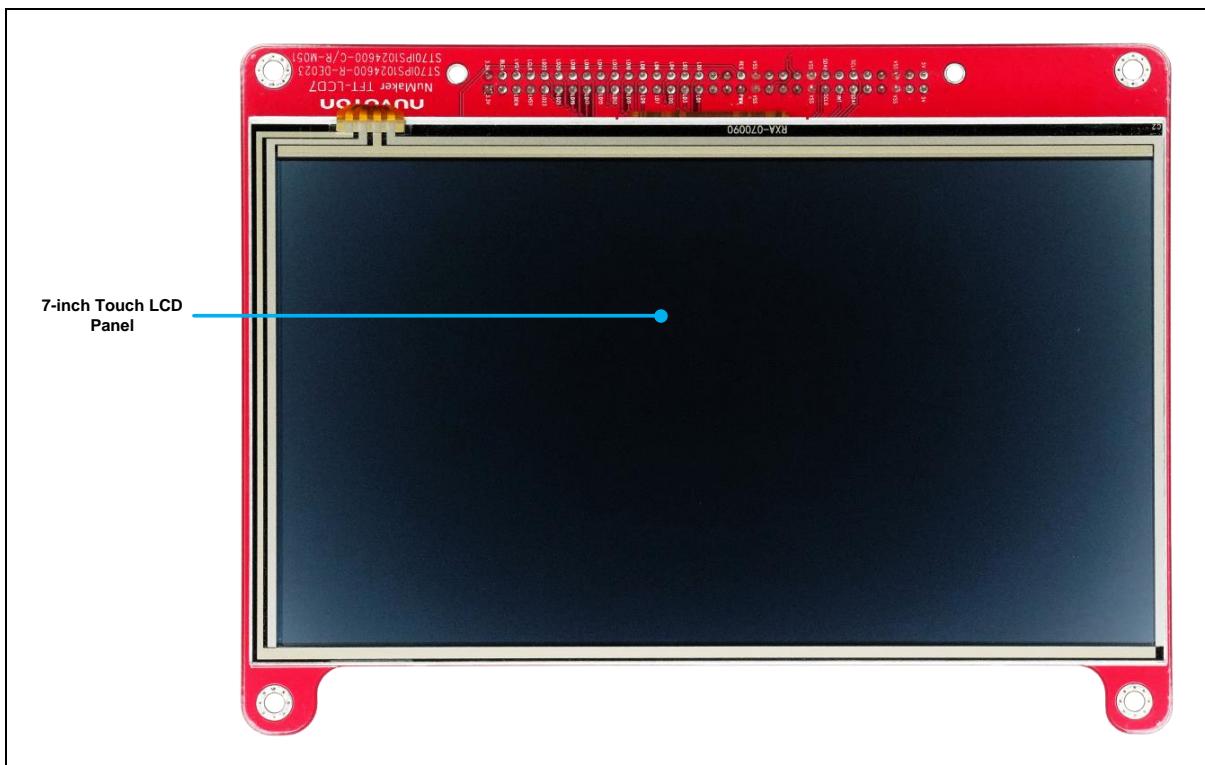

Figure 3-5 Front View of 7" TFT LCD Daughter Board

3.3.2 Rear View

Figure 3-6 shows the main components from the rear view of 7" TFT LCD daughter board.

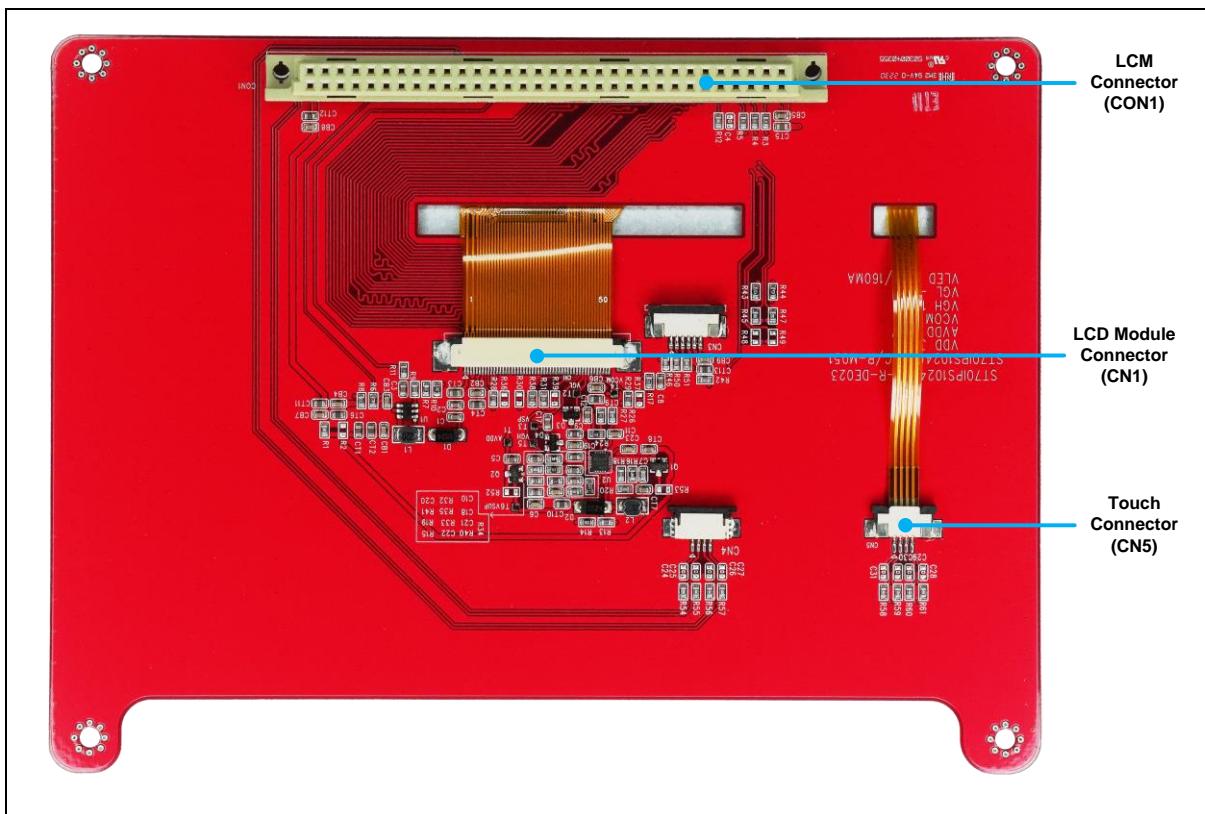

Figure 3-6 Rear View of 7" TFT LCD Daughter Board

3.3.3 Connectors

- LCD Module Connector (CN1): FPC (pitch-0.5mm x 50) connector of TFT LCD module.
- LCM Connector (CON1): To connect with the LCM connector (CON9) of the NuMaker-BASE-MA35D1B1 board.
- Touch Connector (CN5): 4-wire resistive-touch connector of TFT LCD touch screen.

4 QUICK START

This chapter guides users step by step to start the NuMicro NuMaker-HMI-MA35D1-S1 evaluation environment based on the assembled boards: NuMaker-SOM-MA35D16A81 board, NuMaker-BASE-MA35D1B1 board and TFT LCD daughter board. After the steps are completed successfully, users can see the demonstration on the LCD screen and try to operate the demonstration on the LCD screen by finger touch. For more detailed information and description about the board hardware setting and configuration of NuMaker-SOM-MA35D16A81 board and NuMaker-BASE-MA35D1B1 board, please see the Hardware Configuration chapter.

4.1 Hardware Setup and Power On

4.1.1 Configure Power-on Setting

The second step is to make sure the power-on setting for the booting source selection on the DIP Switch (SW4) followed the correct ON/OFF states shown in the following Table 4-3 and Table 4-4.

After choosing the correct power-on setting on these DIP switches, the evaluation environment will boot from the image stored in the eMMC1 NAND Flash memory device mounted on the NuMaker-SOM-MA35D16A81 board when power is supplied to the NuMaker-BASE-MA35D1B1 board.

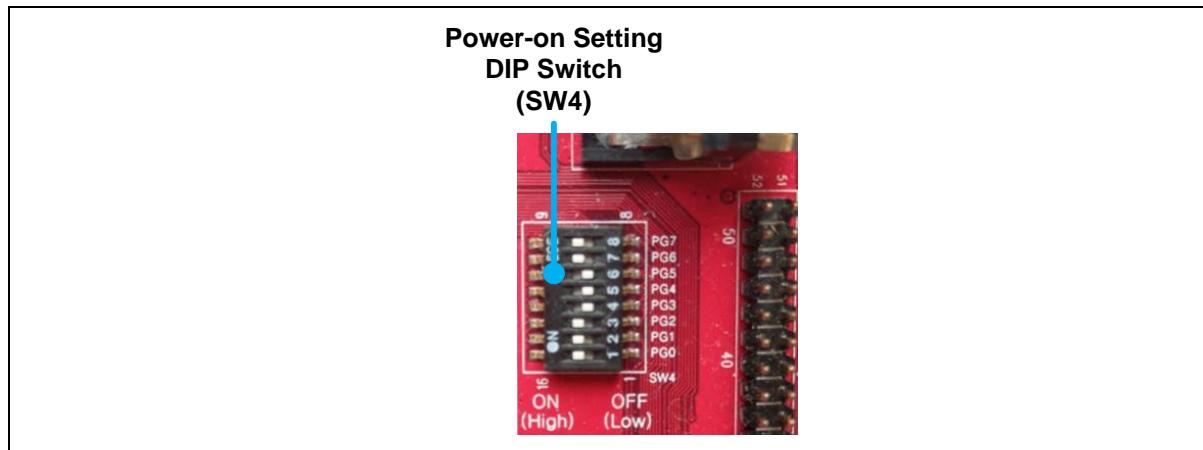

Figure 4-1 Power-on Setting DIP Switch (SW4)

- Options for secure boot enable or disable:

SW4.1 / PG0*	Secure Booting
Low	Enable
High (ON)	Disable

Note *: The GPIO PG0 is internal weakly pull-down.

Table 4-1 Secure Boot Disable Configuration

- Options for booting source QSPI0 and SD/eMMC IO voltage selection:

SW4.2 / PG1*	Boot Source QSPI0 and SD/eMMC I/O Voltage
Low	3.3V
High (ON)	1.8V

Note *: The GPIO PG1 is internal weakly pull-down.

Table 4-2 eMMC1 Boot Source IO Voltage Configuration

- Options for booting source selection:

SW4.4 / PG3*	SW4.3 / PG2*	Boot Source
Low	Low	QSPI0 Flash
Low (OFF)	High (ON)	SD/eMMC
High	Low	NAND Flash
High	High	USB

Note *: These GPIO PG2 and PG3 are internal weakly pull-down.

Table 4-3 SD/eMMC Boot Source Configuration

- Options for booting from eMMC1 NAND Flash memory device:

SW4.7 / PG6* ¹	Boot from SD/eMMC
Low (OFF)	SD0/eMMC0 Boot
High (ON)	SD1/eMMC1 Boot²

Note *1: The GPIO PG6 is internal weakly pull-down.

Note *2: The eMMC1 NAND Flash memory device is on the NuMaker-SOM-MA35D16A81 board.

Table 4-4 eMMC1 Boot Source Configuration

SW4.8 / PG7* ¹	Boot from SD/eMMC
Low	eMMC 4-bit Booting ²
High	eMMC 8-bit Booting²

Note *1: The GPIO PG7 is internal weakly pull-down.

Note *2: The eMMC1 NAND Flash memory device is on the NuMaker-SOM-MA35D16A81 board.

Table 4-5 eMMC1 NAND Flash Device Boot Source eMMC 8-bit Configuration

4.1.2 Power On the NuMaker-BASE-MA35D1B1 Board

The third step is to plug the head of an adapter that can supply 5V/2A power into the power jack (CON1) on the NuMaker-BASE-MA35D1B1 board. Then, switch on the Slide Switch (SW1) to the ON side to supply power on the NuMaker-BASE-MA35D1B1 board.

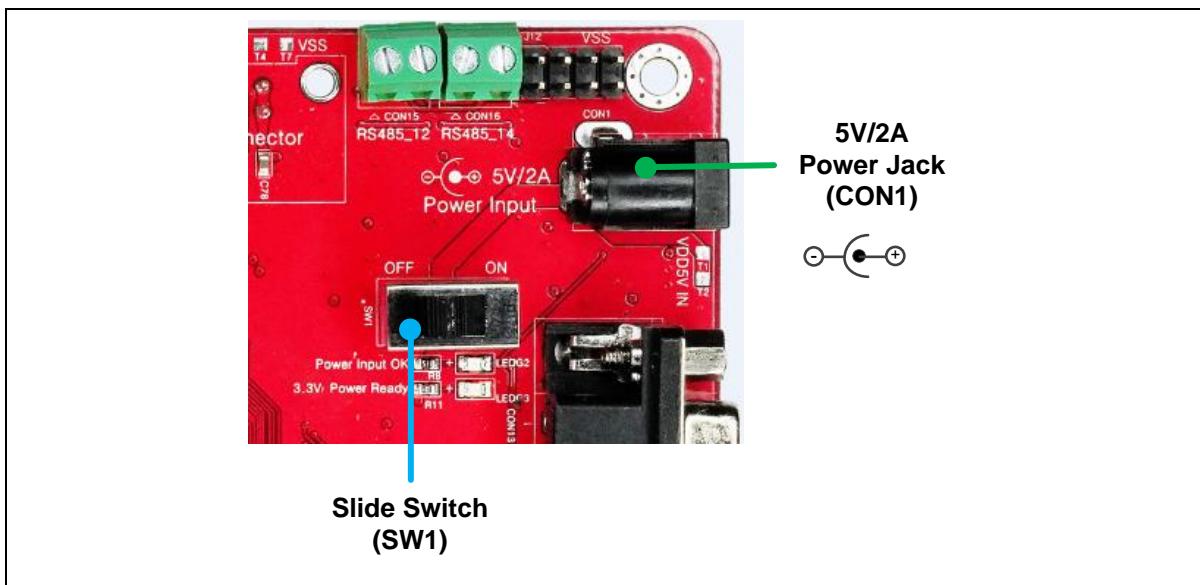

Figure 4-2 Power Jack (CON1) and Slide Switch (SW1)

4.1.3 VCOM Port (Optional)

User can connect the USB micro-B connector (CON21) and plug-in to the PC host with an USB cable to display the messages on PC when the evaluation environment is booting or CPU is running in the Linux kernel. User also needs to select the right serial COM port on the PC and setup the serial port at 115200 Baud rate, 8-bit Data, none Parity bit, 1-bit Stop bit and none Flow Control.

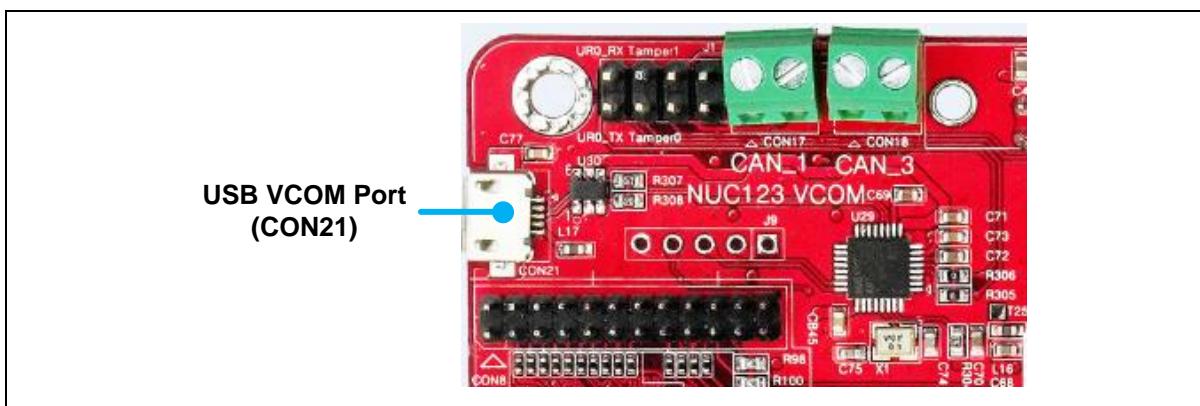

Figure 4-3 USB VCOM Port (CON21)

4.2 Embedder Demos

After the NuMaker-HMI-MA35D1-S1 board is successfully powered on, the MA35D1 target chip will enter the Linux OS and the TFT LCD screen will show the main screen as Figure 4-4. User can see six kinds of demonstration blocks on the TFT LCD screen and can try to operate each demonstration on the TFT LCD screen by finger touch. For more detailed information about these demonstrations, please visit and browse [Nuvoton website](#) and search the related description or documents on the website.

Figure 4-4 Main Screen of Demonstration

4.2.1 H.264 Video Playback

This demonstration displays MP4 videos via VC8000 h.264 decoder embedded in the target chip MA35D1 microprocessor. The display result on the TFT LCD screen is shown as Figure 4-5.

Figure 4-5 H.264 Video Playback Demonstration

4.2.2 ML People Counting

This machine learning (ML) demonstration counts the people captured from the USB CMOS camera and shows the people counting result on the TFT LCD screen as Figure 4-6.

Figure 4-6 ML People Counting Demonstration

4.2.3 2D Accelerator

The MA35D1 series supports the 2D hardware acceleration engine, Figure 4-7 shows the QT demonstration result that the MA35D1 uses the 2D engine through DirectFB to show the mice Blit pictures on the TFT LCD screen.

Figure 4-7 2D Accelerator Demonstration

4.2.4 VoIP Demonstration

This demonstration supports a portable and modular SIP User-Agent with audio and video through wire connection between the NuMaker-HMI-MA35D1-S1 board and PC/NB/smart-phone. The result is shown in Figure 4-8.

Figure 4-8 VoIP Demonstration

4.2.5 Data Security

This demonstration shows how to use a Secure Key (SW key) to restore the protected data, the Secure Key is encrypted by the key stored in OTP (One-Time Program) in the OP-TEE OS. Figure 4-9 shows the data flow and structure about this demonstration.

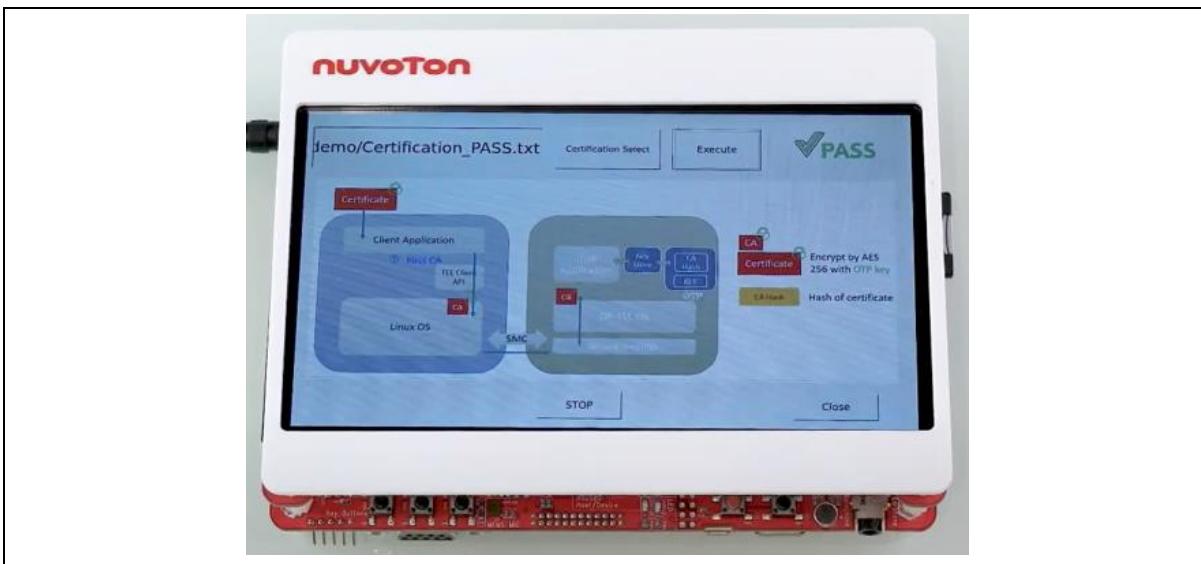

Figure 4-9 Data Security Demonstration

4.2.6 Keyword Spotting by RTP M4

This demonstration describes an example about how to use real-time processor (RTP) Arm Cortex-M4 embedded in the MA35D1 series to wake up the Arm Cortex A35 core in Deep Power-down (DPD) mode. When A35 core enters DPD mode, the RTP M4 runs the Keyword Spotting code and identifies the keyword voice input from the microphone on the NuMaker-HMI-MA35D1-S1 board. After the keyword voice is matched, the RTP M4 will generate an interrupt to wake up the A35 core. Figure 4-10 shows the data flow and structure about the demonstration.

Figure 4-10 Keyword Spotting by RTP M4 Demonstration

5 SUPPORTING RESOURCES

5.1 Documents

For more details about MA35D1 series documents, for example, Technical Reference Manual, Datasheet, Application Note and User Manual documents, please visit [Nuvoton website](#) and search for the Arm Cortex-A35 MPUs product line for the MA35D1 series products from the “Products” menu on the [Nuvoton website](#) homepage.

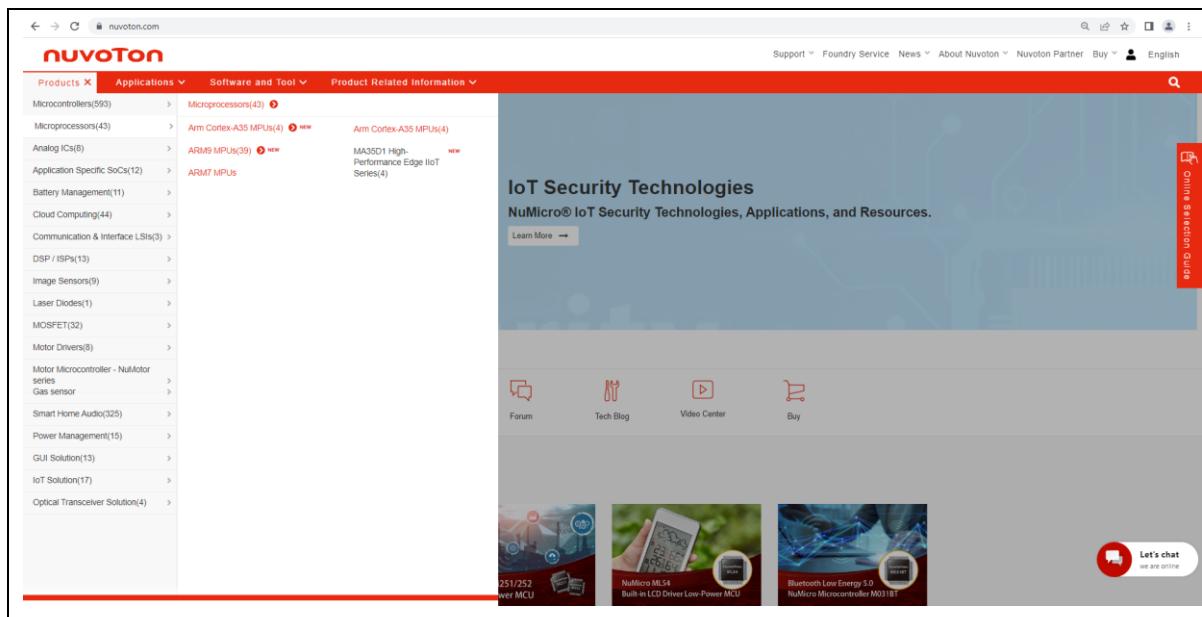

Figure 5-1 Nuvoton Website

5.2 Software

For more details about MA35D1 series software, for example, BSP (Board Support Package), Yocto, Buildroot, U-Boot, Linux, software NuWriter tool and example code, please visit [GitHub's website](#). The related Github resources are listed and shown as Figure 5-2.

7 REVISION HISTORY

Date	Revision	Description
2022.07.27	1.00	<ul style="list-style-type: none">Initial version.
2022.11.02	1.01	<ul style="list-style-type: none">Updated Figure 1-1, Figure 1-2, Figure 1-3, Figure 5-2, Figure 6-2, and Table 3-1.Updated the options about USB booting source in section 3.2.9.Removed section 4.1.5.
2022.12.29	1.02	<ul style="list-style-type: none">Updated Figure 6-3, Figure 6-4, Figure 6-5, Figure 6-6, Figure 6-7, Figure 6-8, Figure 6-14, Figure 6-15, Figure 6-16, Figure 6-17, Figure 6-21 and Figure 6-22.
2023.4.20	1.03	<ul style="list-style-type: none">Updated pictures in Figure 1-1, Figure 1-2, Figure 1-3, Figure 1-4, Figure 1-5, Figure 3-1, Figure 3-2, Figure 3-3, Figure 3-4, Figure 3-5, Figure 3-6, Figure 4-2, Figure 4-3, Figure 6-10, Figure 6-11, Figure 6-34 and Figure 6-35.Added or updated notes in Table 3-1, Table 3-3, Table 3-4, Table 3-13, Table 3-27, Figure 6-2, Figure 6-5 and Figure 6-6.Updated section 2.2, 3.1.4, 3.2.14, 3.2.15, 3.2.19, 3.2.23 and 3.3.3.Updated Figure 6-12 ~ Figure 6-33 for NuMaker-BASE-MA35D1B1 base board V2.1 schematics.
2023.6.12	1.04	<ul style="list-style-type: none">Updated the chapter 1.
2023.9.25	1.05	<ul style="list-style-type: none">Updated the Figure 6-4.
2024.5.21	1.06	<ul style="list-style-type: none">Added a note for GPIO PE15 (UART0_RXD) pin in section 3.2.18, Table 3-29, Table 3-30, Figure 6-4, Figure 6-28 and Figure 6-31.
2024.8.20	1.07	<ul style="list-style-type: none">Updated the Figure 6-5.
2024.12.13	1.08	<ul style="list-style-type: none">Added a note for GPIO PG11 ~ PG15 in Table 3-38, Table 3-39, Table 3-40 and Figure 6-30.
2025.3.12	1.09	<ul style="list-style-type: none">Updated the sections 3.2.9 and 4.1.1.

Important Notice

Nuvoton Products are neither intended nor warranted for usage in systems or equipment, any malfunction or failure of which may cause loss of human life, bodily injury or severe property damage. Such applications are deemed, "Insecure Usage".

Insecure usage includes, but is not limited to: equipment for surgical implementation, atomic energy control instruments, airplane or spaceship instruments, the control or operation of dynamic, brake or safety systems designed for vehicular use, traffic signal instruments, all types of safety devices, and other applications intended to support or sustain life.

All Insecure Usage shall be made at customer's risk, and in the event that third parties lay claims to Nuvoton as a result of customer's Insecure Usage, customer shall indemnify the damages and liabilities thus incurred by Nuvoton.

Please note that all data and specifications are subject to change without notice.
All the trademarks of products and companies mentioned in this datasheet belong to their respective owners.
